INTRODUCTION

ServerQuery is a command-line interface built into the *TeamSpeak 3 Server* which allows powerful scripting and automation tools to be built based on the exact same instruction set and functionality provided by the *TeamSpeak 3 Client*. For example, you can use scripts to automate the management of virtual servers or nightly backups. In short, you can perform operations more efficiently by using *ServerQuery* scripts than you can by using a user interface.

This manual describes the general *ServerQuery* usage and syntax and provides examples for all commands available on a *TeamSpeak 3 Server* running version >= **3.0.5**.

How to Establish a Server Query Connection

Connecting to a *ServerQuery* interface can be done by using a character-mode terminal client such as *Telnet* or *PuTTY*. Basically, a *ServerQuery* client is acting like a real client, except it's unable to send or receive voice data.

Per default, the *TeamSpeak 3 Server* is waiting for incoming *ServerQuery* connections on port *10011* (TCP). On success, the server should welcome you with a TS3 prompt.

COMMAND SYNTAX

This section describes the syntax of all ServerQuery commands.

SUMMARY OF COMMAND SYNTAX

ServerQuery commands follow the general syntax of:

```
command [parameter...] [option...]
```

The command is a single word which may contain lowercase letters, digits and underscore symbols (a-z 0-9 _) followed by a whitespace. A parameter block is made up of one or more key-value pairs separated by a whitespace. In addition, various commands support options which are specified with a leading minus. For example:

```
command key1=value1 key2=value2 -option1 -option2
```

Some commands accept grouped or nested parameters, therefore allowing you to apply an action on more than one object. Those parameters are separated by a pipe symbol (|). For example:

```
command key1=value1|key1=value2|key1=value3
```

The pipe symbol (|) is also used to separate list items (e.g. multiple clients in a virtual servers clientlist).

EXAMPLES OF COMMAND SYNTAX

The following provides some common *ServerQuery* syntax examples:

```
serverlist
clientlist -uid -away -groups
clientdbfind pattern=ScP
clientdbfind pattern=FPMPSC6MXqXq751dX7BKV0JniSo= -uid
clientkick reasonid=5 reasonmsg=Go\saway! clid=1|clid=2|clid=3
channelmove cid=16 cpid=1 order=0
sendtextmessage targetmode=2 target=12 msg=Hello\sWorld!
```

ESCAPING

You cannot use whitespaces or any special characters in parameters. Instead, the *TeamSpeak 3 Server* supports the use of escape patterns which can be used to insert newlines, tabs or other special characters into a parameter string. The same escape patterns are used to clean up the servers output and prevent parsing issues.

Here's an example on how to escape a parameter string correctly.

RIGHT:

serveredit virtualserver_name=TeamSpeak\s]\p[\sServer

WRONG:

serveredit virtualserver_name=TeamSpeak]|[Server

The following characters need to be escaped if they are to be used:

NAME	CHAR	ASCII	REPLACE CHAR	REPLACE ASCII
Backslash	\	92	\\	92 92
Slash	/	47	V	92 47
Whitespace	пп	32	\s	92 115
Pipe	I	124	\p	92 112
Bell	\a	7	\a	92 97
Backspace	\b	8	\b	92 98
Formfeed	\f	12	\f	92 102
Newline	\n	10	\n	92 110
Carriage Return	\r	13	\r	92 114
Horizontal Tab	\t	9	\t	92 116
Vertical Tab	\v	11	\v	92 118

WHITELISTING AND BLACKLISTING

The *TeamSpeak 3 Server* includes flood protection technology for the *ServerQuery* interface which means that a *ServerQuery* client can only execute a finite number of commands per time unit. These limits are controlled by the following server instance properties:

- SERVERINSTANCE_SERVERQUERY_FLOOD_COMMANDS
- SERVERINSTANCE_SERVERQUERY_FLOOD_TIME

Per default, the *TeamSpeak 3 Server* will not allow more than 10 commands within 3 seconds from the same source. You can use the following command to modify these settings:

instanceedit serverinstance_serverquery_flood_commands=10 serverinstance_serverquery_flood_time=3

If you're using automated scripts or web applications to manage your servers, it's most likely possible that you'll exceed those limits. Therefore, the *TeamSpeak 3 Server* provides whitelisting and blacklisting features for the *ServerQuery* interface.

How to Use the Whitelist

The whitelist is a list of approved hosts that are allowed to ignore the flood protection settings on a *TeamSpeak 3 Server*. For example, if you're using a web administration interface, we strongly recommend that you add the IP address of your web server to the whitelist file. In a new installation of the *TeamSpeak 3 Server*, this file is called *query_ip_whitelist.txt* and it contains the loopback IP address of your server (127.0.0.1). You can enter an infinite number of IP addresses to the whitelist, one IP address per line.

85.25.120.233 80.190.225.233 75.125.142.2 194.97.114.2 79.218.0.0/16 127.0.0.1

The TeamSpeak 3 Server also supports <u>Classless Inter-Domain Routing</u> (CIDR) notation so you can easily add an entire network to your whitelists. CIDR notation uses a syntax of specifying IP addresses using the base address of the network followed by a slash and the size of the routing prefix, e.g., 192.168.0.0/16 (IPv4) and 2001:db8::/32 (IPv6).

HOW TO USE THE BLACKLIST

The blacklist is a list of hosts that, for one reason or another, are being denied access to the *ServerQuery* interface. In a new installation of the *TeamSpeak 3 Server*, this file is called *query_ip_blacklist.txt* and is empty. The syntax of this file is equal to the whitelist, e.g. 0.0.0.0/0 will refuse all incoming connections.

COMMAND REFERENCE

This is a list of the commands available when using the *TeamSpeak 3 ServerQuery* interface.

HELP

Provides information about *ServerQuery* commands. Used without parameters, help lists and briefly describes every command.

Permissions:

b_serverinstance_help_view

Syntax:

help [{command}]

error id=0 msg=ok

Example:

```
help serverinfo
Usage: serverinfo
Displays detailed configuration information about a virtual server including ID, number of clients online, configuration, etc.
```

QUIT

Closes the ServerQuery connection to the TeamSpeak 3 Server instance.

Syntax:

quit

Example:

quit

LOGIN

Authenticates with the TeamSpeak 3 Server instance using given ServerQuery login credentials.

Related Permissions:

b_serverquery_login

Syntax:

```
login client_login_name={username} client_login_password={password}
login {username} {password}
```

Example:

```
login client_login_name=xyz client_login_password=xyz
error id=0 msg=ok
```

LOGOUT

Deselects the active virtual server and logs out from the server instance.

Permissions:

b_serverquery_login

Syntax:

logout

Example:

logout

error id=0 msg=ok

VERSION

Displays the servers version information including platform and build number.

Permissions:

b_serverinstance_version_view

Syntax:

version

Example:

version

version=3.0.0-alpha4 build=9155 platform=Linux error id=0 msg=ok

HOSTINFO

Displays detailed connection information about the server instance including uptime, number of virtual servers online, traffic information, etc.

For detailed information, see **Server Instance Properties**.

Permissions:

b_serverinstance_info_view

Svntax:

hostinfo

Example:

hostinfo

instance_uptime=1903203 host_timestamp_utc=1259337246 virtualservers_running_total=1
connection_filetransfer_bandwidth_sent=0 ...
error id=0 msg=ok

INSTANCEINFO

Displays the server instance configuration including database revision number, the file transfer port, default group IDs, etc.

For detailed information, see Server Instance Properties.

Permissions:

b_serverinstance_info_view

Syntax:

instanceinfo

Example:

instanceinfo

serverinstance_database_version=11 serverinstance_filetransfer_port=30033 serverinstance_template_guest_serverquery_group=1 serverinstance_template_serveradmin_group=3 ... error id=0 msg=ok

INSTANCEEDIT

Changes the server instance configuration using given properties.

For detailed information, see **Server Instance Properties**.

Permissions:

b_serverinstance_modify_settings

Syntax:

instanceedit [instance_properties...]

Example:

instanceedit serverinstance_filetransfer_port=1337
 error id=0 msg=ok

BINDINGLIST

Displays a list of IP addresses used by the server instance on multi-homed machines.

Permissions:

b_serverinstance_binding_list

Syntax:

bindinglist

Example:

bindinglist
 ip=0.0.0.0
 error id=0 msg=ok

USE

Selects the virtual server specified with sid or port to allow further interaction. The *ServerQuery* client will appear on the virtual server and acts like a real *TeamSpeak 3 Client*, except it's unable to send or receive voice data.

If your database contains multiple virtual servers using the same UDP port, use will select a random virtual server using the specified port.

Permissions:

b_virtualserver_select

Syntax:

```
use [sid={serverID}] [port={serverPort}] [-virtual]
use {serverID} [-virtual]
```

Example:

use sid=1 error id=0 msa=ok

SERVERLIST

Displays a list of virtual servers including their ID, status, number of clients online, etc. If you're using the -all option, the server will list all virtual servers stored in the database. This can be useful when multiple server instances with different machine IDs are using the same database. The machine ID is used to identify the server instance a virtual server is associated with.

The status of a virtual server can be either online, offline, deploy running, booting up, shutting down and virtual online. While most of them are self-explanatory, virtual online is a bit more complicated.

Please note that whenever you select a virtual server which is currently stopped, it will be started in virtual mode which means you are able to change its configuration, create channels or change permissions, but no regular *TeamSpeak 3 Client* can connect. As soon as the last *ServerQuery* client deselects the virtual server, its status will be changed back to offline.

Permissions:

b_serverinstance_virtualserver_list

Syntax:

```
serverlist [-uid] [-short] [-all] [-onlyoffline]
```

Example:

serverlist

 $\label{lem:contine} virtual server_id=1\ virtual server_port=9987\ virtual server_status=online\ virtual server_clients online=6\ ...\ error\ id=0\ msg=ok$

SERVERIDGETBYPORT

Displays the database ID of the virtual server running on the UDP port specified by virtual server_port.

Permissions:

b_serverinstance_virtualserver_list

Syntax:

serveridgetbyport virtualserver_port={serverPort}

Example:

```
serveridgetbyport virtualserver_port=9987
server_id=1
error id=0 msg=ok
```

SERVERDELETE

Deletes the virtual server specified with sid. Please note that only virtual servers in stopped state can be deleted.

Permissions:

b_virtualserver_delete

Syntax:

serverdelete sid={serverID}

Example:

```
serverdelete sid=1
error id=0 msg=ok
```

SERVERCREATE

Creates a new virtual server using the given properties and displays its ID, port and initial administrator privilege key. If virtual server_port is not specified, the server will test for the first unused UDP port.

The first virtual server will be running on UDP port 9987 by default. Subsequently started virtual servers will be running on increasing UDP port numbers.

For detailed information, see Virtual Server Properties.

Permissions:

b_virtualserver_create

Syntax:

servercreate virtualserver_name={serverName} [virtualserver_properties...]

Example

```
servercreate virtualserver_name=TeamSpeak\s]\p[\sServer virtualserver_port=9988
virtualserver_maxclients=32
  sid=2 virtualserver_port=9988 token=eKnFZQ9EK7G7MhtuQB6+N2B1PNZZ6OZL3ycDp2OW
  error id=0 msd=ok
```

SERVERSTART

Starts the virtual server specified with sid. Depending on your permissions, you're able to start either your own virtual server only or all virtual servers in the server instance.

Permissions:

b_virtualserver_start_any b_virtualserver_start

Syntax:

serverstart sid={serverID}

```
serverstart sid=1
error id=0 msg=ok
```

SERVERSTOP

Stops the virtual server specified with sid. Depending on your permissions, you're able to stop either your own virtual server only or all virtual servers in the server instance.

Permissions:

b_virtualserver_stop_any b_virtualserver_stop

Syntax:

serverstop sid={serverID}

Example:

serverstop sid=1
error id=0 msg=ok

SERVERPROCESSSTOP

Stops the entire *TeamSpeak 3 Server* instance by shutting down the process.

Permissions:

b_serverinstance_stop

Syntax:

serverprocessstop

Example:

serverprocessstop error id=0 msg=ok

SERVERINFO

Displays detailed configuration information about the selected virtual server including unique ID, number of clients online, configuration, etc.

For detailed information, see Virtual Server Properties.

Permissions:

b_virtualserver_info_view

Syntax:

serverinfo

Example:

serverinfo

 $\label{thm:cont} virtual server_port=9987\ virtual server_unique_identifier=zrPkjznB1tMnRwj01xx7RxXjqeY=virtual server_name=TeamSpeak \s] I[\sServer_...error id=0 msg=ok] is a simple of the server of the server$

SERVERREQUESTCONNECTIONINFO

Displays detailed connection information about the selected virtual server including uptime, traffic information, etc.

Permissions:

b_virtualserver_connectioninfo_view

Syntax

serverrequestconnectioninfo

Example:

serverrequestconnectioninfo

 $connection_file transfer_bandwidth_sent=0 \ connection_file transfer_bandwidth_received=0 \ connection_packets_sent_total=241454 \ \dots \ error \ id=0 \ msg=ok$

SERVERTEMPPASSWORDADD

Sets a new temporary server password specified with pw. The temporary password will be valid for the number of seconds specified with duration. The client connecting with this password will automatically join the channel specified with tcid. If tcid is set to 0, the client will join the default channel.

Permissions:

b_virtualserver_modify_password

Syntax:

 $server temp password add pw=\{password\} \ desc=\{description\} \ duration=\{seconds\} \ tcid=\{channelID\} \ tcpw=\{channelPW\}$

Example:

 $server temp password add \ pw=secret \ desc=none \ duration=3600 \ tcid=117535 \ tcpw=secret \ error \ id=0 \ msg=ok$

SERVERTEMPPASSWORDDEL

Deletes the temporary server password specified with pw.

Permissions:

b_virtualserver_modify_password

Svntax:

servertemppassworddel pw={password}

Example:

servertemppassworddel pw=secret
error id=0 msg=ok

SERVERTEMPPASSWORDLIST

Returns a list of active temporary server passwords. The output contains the clear-text password, the nickname and unique identifier of the creating client.

Permissions:

b_virtualserver_modify_password

Syntax:

servertemppasswordlist

Example:

servertemppasswordlist

 $\label{eq:mickname} \begin{tabular}{ll} \beg$

SERVEREDIT

Changes the selected virtual servers configuration using given properties. Note that this command accepts multiple properties which means that you're able to change all settings of the selected virtual server at once.

For detailed information, see Virtual Server Properties.

Permissions:

b_virtualserver_modify_name

b_virtualserver_modify_welcomemessage

b_virtualserver_modify_maxclients

b_virtualserver_modify_reserved_slots

b_virtualserver_modify_password

b_virtualserver_modify_default_servergroup

b_virtualserver_modify_default_channelgroup

b_virtualserver_modify_default_channeladmingroup

b_virtualserver_modify_ft_settings

b_virtualserver_modify_ft_quotas

b_virtualserver_modify_channel_forced_silence

b_virtualserver_modify_complain

b_virtualserver_modify_antiflood

b_virtualserver_modify_hostmessage

b_virtualserver_modify_hostbanner

b_virtualserver_modify_hostbutton

b_virtualserver_modify_port

b_virtualserver_modify_autostart

 $b_virtual server_modify_needed_identity_security_level$

 $b_virtual server_modify_priority_speaker_dimm_modificator$

b_virtualserver_modify_log_settings

b_virtualserver_modify_icon_id

b_virtualserver_modify_weblist

b_virtualserver_modify_min_client_version

b_virtualserver_modify_codec_encryption_mode

Syntax:

serveredit [virtualserver_properties...]

Example:

serveredit virtualserver_name=TeamSpeak\s]\p[\sServer virtualserver_maxclients=32
error id=0 msa=ok

SERVERGROUPLIST

Displays a list of server groups available. Depending on your permissions, the output may also contain global ServerQuery groups and template groups.

Permissions:

b_serverinstance_modify_querygroup

 $b_server instance_modify_templates$

b_virtualserver_servergroup_list

Syntax:

servergrouplist

Example:

serverarouplist

sgid=9 name=Server\sAdmin type=1 iconid=300 savedb=1|sgid=10 name=Normal type=1 iconid=0 savedb=1|sgid=11 ... error id=0 msq=ok

SERVERGROUPADD

Creates a new server group using the name specified with name and displays its ID. The optional type parameter can be used to create ServerQuery groups and template groups. For detailed information, see Definitions.

Permissions:

b_virtualserver_servergroup_create

Svntax:

servergroupadd name={groupName} [type={groupDbType}]

Example:

servergroupadd name=Server\sAdmin
sgid=13
error id=0 msg=ok

SERVERGROUPDEL

Deletes the server group specified with sgid. If force is set to 1, the server group will be deleted even if there are clients within.

Permissions:

b_virtualserver_servergroup_delete

Syntax

servergroupdel sgid={groupID} force={1|0}

Example:

servergroupdel sgid=13
error id=0 msg=ok

SERVERGROUPCOPY

Creates a copy of the server group specified with ssgid. If tsgid is set to θ , the server will create a new group. To overwrite an existing group, simply set tsgid to the ID of a designated target group. If a target group is set, the name parameter will be ignored.

The type parameter can be used to create ServerQuery groups and template groups. For detailed information, see <u>Definitions</u>.

Permissions:

b_virtualserver_servergroup_create i_group_modify_power i_group_needed_modify_power

Syntax:

 $server group copy \ ssgid=\{sourceGroupID\} \ tsgid=\{targetGroupID\} \ name=\{groupName\} \ type=\{groupDbType\} \ name=\{groupName\} \ type=\{groupDbType\} \ name=\{groupName\} \ type=\{groupDbType\} \ name=\{groupName\} \ type=\{groupDbType\} \ name=\{groupName\} \ type=\{groupName\} \ type=\{group$

Example:

```
servergroupcopy ssgid=6 tsgid=0 name=My\sGroup\s(Copy) type=1 sgid=21 error id=0 msg=ok
```

SERVERGROUPRENAME

Changes the name of the server group specified with sgid.

Permissions:

i_group_modify_power
i_group_needed_modify_power

Syntax:

servergrouprename sgid={groupID} name={groupName}

```
servergrouprename sgid=13 name=New\sName
error id=0 msg=ok
```

SERVERGROUPPERMLIST

Displays a list of permissions assigned to the server group specified with sgid. If the -permsid option is specified, the output will contain the permission names instead of the internal IDs.

Permissions:

b_virtualserver_servergroup_permission_list

Syntax

servergrouppermlist sgid={groupID} [-permsid]

Example:

```
servergrouppermlist sgid=13
permid=8470 permvalue=1 permnegated=0 permskip=0|permid=8475 permvalue=1 ...
error id=0 msg=ok
```

SERVERGROUPADDPERM

Adds a set of specified permissions to the server group specified with sgid. Multiple permissions can be added by providing the four parameters of each permission. A permission can be specified by permid or permid.

Permissions:

```
i_group_modify_power
i_group_needed_modify_power
i_permission_modify_power
```

Syntax:

```
server group addperm \ sgid=\{group ID\} \ [permid=\{perm ID\}...] \ [permsid=\{perm Name\}...] \\ permvalue=\{perm Value\}... \ permnegated=\{1|0\}... \ permskip=\{1|0\}... \\ permskip=\{1|0\}... \ permskip=\{1|0\}... \\ permskip=\{1|0\}... \ permskip=\{1|0\}... \\ p
```

Examples

```
servergroupaddperm sgid=13 permid=17276 permvalue=50 permnegated=0 permskip=0|permid=21415
permvalue=20 permnegated=0
   error id=0 msg=ok

servergroupaddperm sgid=3 permsid=b_virtualserver_modify_maxclients permvalue=1 permnegated=0
permskip=0
   error id=0 msg=ok
```

SERVERGROUPDELPERM

Removes a set of specified permissions from the server group specified with sgid. Multiple permissions can be removed at once. A permission can be specified by permid or permsid.

Permissions:

```
i_group_modify_power
i_group_needed_modify_power
i_permission_modify_power
```

Syntax:

```
servergroupdelperm sgid={groupID} [permid={permID}...] [permsid={permName}...]
```

```
servergroupdelperm sgid=16 permid=17276|permid=21415
error id=0 msg=ok
servergroupdelperm sgid=3 permsid=b_virtualserver_modify_maxclients
error id=0 msg=ok
```

SERVERGROUPADDCLIENT

Adds a client to the server group specified with sgid. Please note that a client cannot be added to default groups or template groups.

Permissions:

i_group_member_add_power i_group_needed_member_add_power

Syntax

servergroupaddclient sgid={groupID} cldbid={clientDBID}

Example:

servergroupaddclient sgid=16 cldbid=3
error id=0 msg=ok

SERVERGROUPDELCLIENT

Removes a client specified with cldbid from the server group specified with sgid.

Permissions:

i_group_member_remove_power i_group_needed_member_remove_power

Syntax

servergroupdelclient sgid={groupID} cldbid={clientDBID}

Example:

servergroupdelclient sgid=16 cldbid=3
error id=0 msq=ok

SERVERGROUPCLIENTLIST

Displays the IDs of all clients currently residing in the server group specified with sgid. If you're using the optional -names option, the output will also contain the last known nickname and the unique identifier of the clients.

Permissions:

b_virtualserver_servergroup_client_list

Syntax:

servergroupclientlist sgid={groupID} [-names]

Example:

servergroupclientlist sgid=16
 cldbid=7|cldbid=8|cldbid=9|cldbid=11|cldbid=13|cldbid=16|cldbid=18|cldbid=29|cldbid=32|cldbid=34|cldbid=37|cldbid=4
 0|cldbid=47|cldbid=53
 error id=0 msg=ok

SERVERGROUPSBYCLIENTID

Displays all server groups the client specified with clabid is currently residing in.

Syntax:

servergroupsbyclientid cldbid={clientDBID}

Example:

servergroupsbyclientid cldbid=18 name=Server\sAdmin sgid=6 cldbid=18 error id=0 msg=ok

SERVERGROUPAUTOADDPERM

Adds a set of specified permissions to *ALL* regular server groups on all virtual servers. The target groups will be identified by the value of their i_group_auto_update_type permission specified with sgtype. Multiple permissions can be added at once. A permission can be specified by permid or permid.

The known values for sgtype are:

- 10: Channel Guest
- 15: Server Guest
- 20: Query Guest
- 25: Channel Voice
- 30: Server Normal
- **35:** Channel Operator
- 40: Channel Admin
- **45:** Server Admin
- 50: Query Admin

Permissions:

b_permission_modify_power_ignore

Svntax:

 $server group auto add perm \ sg type=\{group ID\} \ [perm id=\{perm ID\}...] \ [perm sid=\{perm Name\}...] \\ perm value=\{perm Value\}... \ perm negated=\{1|0\}... \ perm skip=\{1|0\}...$

Example:

servergroupautoaddperm sgtype=45 permsid=b_virtualserver_start permvalue=1 permskip=0 permnegated=0 error id=0 msa=ok

SERVERGROUPAUTODELPERM

Removes a set of specified permissions from *ALL* regular server groups on all virtual servers. The target groups will be identified by the value of their i_group_auto_update_type permission specified with sgtype. Multiple permissions can be removed at once. A permission can be specified by permid or permid.

The known values for sgtype are:

- 10: Channel Guest
- 15: Server Guest
- 20: Query Guest
- 25: Channel Voice
- 30: Server Normal
- 35: Channel Operator
- 40: Channel Admin
- **45:** Server Admin
- 50: Query Admin

Permissions:

b_permission_modify_power_ignore

Svntax:

servergroupautoaddperm sgtype={groupID} [permid={permID}...] [permsid={permName}...]

Example:

servergroupautoaddperm sgtype=45 permsid=b_virtualserver_start
 error id=0 msg=ok

SERVERSNAPSHOTCREATE

Displays a snapshot of the selected virtual server containing all settings, groups and known client identities. The data from a server snapshot can be used to restore a virtual servers configuration, channels and permissions using the serversnapshotdeploy command.

Permissions:

b_virtualserver_snapshot_create

Svntax:

serversnapshotcreate

Example:

serversnapshotcreate

 $\label{lem:hash=bnTd2E1kNITHjJYRCFjgbKK05P8=|virtualserver_unique_identifier=zrPkjznB1tMnRwj01xx7RxXjqeY=virtualserver_name=TeamSpeak\s]I[\sServer_...error id=0 msg=ok$

SERVERSNAPSHOTDEPLOY

Restores the selected virtual servers configuration using the data from a previously created server snapshot. Please note that the *TeamSpeak 3 Server* does **NOT** check for necessary permissions while deploying a snapshot so the command could be abused to gain additional privileges.

Permissions:

b_virtualserver_snapshot_deploy

Syntax:

serversnapshotdeploy virtualserver_snapshot

Example:

serversnapshotdeploy

hash=bnTd2E1kNITHjJYRCFjgbKK05P8=|virtualserver_unique_identifier=zrPkjznB1tMnRwj01xx7RxXjq= ... error id=0 msg=ok

SERVERNOTIFYREGISTER

Registers for a specified category of events on a virtual server to receive notification messages. Depending on the notifications you've registered for, the server will send you a message on every event in the view of your *ServerQuery* client (e.g. clients joining your channel, incoming text messages, server configuration changes, etc). The event source is declared by the event parameter while id can be used to limit the notifications to a specific channel.

Permissions:

b_virtualserver_notify_register

Svntax:

 $server notify register\ event = \{server | textserver | textserver | textserver | textserver \} \\ [id = \{channel ID\}]$

Example:

servernotifyregister event=server
error id=0 msg=ok

SERVERNOTIFYUNREGISTER

Unregisters all events previously registered with servernotifyregister so you will no longer receive notification messages.

Permissions:

b_virtualserver_notify_unregister

Syntax:

servernotifyunregister

Example:

servernotifyunregister
error id=0 msg=ok

SENDTEXTMESSAGE

Sends a text message a specified target. The type of the target is determined by targetmode while target specifies the ID of the recipient, whether it be a virtual server, a channel or a client.

For detailed information, see **Definitions**.

Permissions:

i_client_private_textmessage_power i_client_needed_private_textmessage_power b_client_server_textmessage_send b_client_channel_textmessage_send

Syntax:

sendtextmessage targetmode={1-3} target={serverID|channelID|clientID} msg={text}

Example:

```
sendtextmessage targetmode=2 target=1 msg=Hello\sWorld!
error id=0 msg=ok
```

LOGVIEW

Displays a specified number of entries from the servers log. If instance is set to 1, the server will return lines from the master logfile (ts3server_0.log) instead of the selected virtual server logfile.

Permissions:

b_serverinstance_log_view b_virtualserver_log_view

Syntax:

```
logview [lines=\{1-100\}] [reverse=\{1|0\}] [instance=\{1|0\}] [begin_pos=\{n\}]
```

Example:

```
logview lines=30 last_pos=403788 file_size=411980 l=\p\slistening\son\s0.0.0:9987 ... error id=0 msg=ok
```

LOGADD

Writes a custom entry into the servers log. Depending on your permissions, you'll be able to add entries into the server instance log and/or your virtual servers log. The loglevel parameter specifies the type of the entry.

For detailed information, see **Definitions**.

Permissions:

b_serverinstance_log_add b_virtualserver_log_add

Syntax:

logadd loglevel={1-4} logmsg={text}

Example:

```
logadd loglevel=4 logmsg=Informational\smessage!
error id=0 msg=ok
```

GM

Sends a text message to all clients on all virtual servers in the *TeamSpeak 3 Server* instance.

Permissions:

b_serverinstance_textmessage_send

Syntax:

gm msg={text}

```
gm msg=Hello\sWorld!
  error id=0 msg=ok
```

CHANNELLIST

Displays a list of channels created on a virtual server including their ID, order, name, etc. The output can be modified using several command options.

Permissions:

b_virtualserver_channel_list

Syntax:

```
channellist [-topic] [-flags] [-voice] [-limits] [-icon] [-secondsempty]
```

Example:

```
channellist -topic
  cid=15 pid=0 channel_order=0 channel_name=Default\sChannel channel_topic=Default\sChannel\shas\sno\s[b]topic[\/b]
  total_clients=2|cid=16 ...
  error id=0 msq=ok
```

CHANNELINFO

Displays detailed configuration information about a channel including ID, topic, description, etc.

For detailed information, see Channel Properties.

Permissions:

b_channel_info_view

Syntax:

channelinfo cid={channelID}

Example:

```
channelinfo cid=1
  channel_name=Default\sChannel channel_topic=Default\sChannel\shas\sno\s[b]topic[\/b]
  channel_description=This\sis\sthe\sdefault\schannel ...
  error id=0 msg=ok
```

CHANNELFIND

Displays a list of channels matching a given name pattern.

Permissions:

b_virtualserver_channel_search

Syntax:

channelfind [pattern={channelName}]

Example:

```
channelfind pattern=default
  cid=15 channel_name=Default\sChannel
  error id=0 msg=ok
```

CHANNELMOVE

Moves a channel to a new parent channel with the ID cpid. If order is specified, the channel will be sorted right under the channel with the specified ID. If order is set to 0, the channel will be sorted right below the new parent.

Permissions:

```
i_channel_min_depth
i_channel_max_depth
b_channel_modify_parent
b_channel_modify_sortorder
```

Syntax

channelmove cid={channelID} cpid={channelParentID} [order={channelSortOrder}]

```
channelmove cid=16 cpid=1 order=0
error id=0 msg=ok
```

CHANNELCREATE

Creates a new channel using the given properties and displays its ID. Note that this command accepts multiple properties which means that you're able to specify all settings of the new channel at once.

For detailed information, see Channel Properties.

Permissions:

i_channel_min_depth

i_channel_max_depth

b_channel_create_child

b_channel_create_permanent

b_channel_create_semi_permanent

b_channel_create_temporary

b_channel_create_with_topic

b_channel_create_with_description

b_channel_create_with_password

b_channel_create_modify_with_codec_speex8

b_channel_create_modify_with_codec_speex16

b_channel_create_modify_with_codec_speex32

b_channel_create_modify_with_codec_celtmono48

i_channel_create_modify_with_codec_maxquality

 $i_channel_create_modify_with_codec_latency_factor_min$

b_channel_create_with_maxclients

b_channel_create_with_maxfamilyclients

b_channel_create_with_sortorder

b_channel_create_with_default

b_channel_create_with_needed_talk_power

Syntax:

channelcreate channel_name={channelName} [channel_properties...]

Example:

```
channelcreate channel_name=My\sChannel channel_topic=My\sTopic
  cid=16
  error id=0 msg=ok
```

CHANNELDELETE

Deletes an existing channel by ID. If force is set to 1, the channel will be deleted even if there are clients within. The clients will be kicked to the default channel with an appropriate reason message.

Permissions:

b_channel_delete_permanent

b_channel_delete_semi_permanent

b_channel_delete_temporary

b_channel_delete_flag_force

Syntax:

channeldelete cid={channelID} force={1|0}

Example:

channeldelete cid=16 force=1 error id=0 msg=ok

CHANNELEDIT

Changes a channels configuration using given properties. Note that this command accepts multiple properties which means that you're able to change all settings of the channel specified with cid at once.

For detailed information, see Channel Properties.

Permissions:

i_channel_min_depth

i_channel_max_depth

b_channel_modify_parent

b_channel_modify_make_default

b_channel_modify_make_permanent

b_channel_modify_make_semi_permanent

b_channel_modify_make_temporary

b_channel_modify_name

b_channel_modify_topic

b_channel_modify_description

b_channel_modify_password

b_channel_modify_codec

b_channel_create_modify_with_codec_speex8

b_channel_create_modify_with_codec_speex16

 $b_channel_create_modify_with_codec_speex32$

b_channel_create_modify_with_codec_celtmono48

b_channel_modify_codec_quality

b_channel_create_modify_with_codec_maxquality

b_channel_modify_codec_latency_factor

b_channel_modify_make_codec_encrypted

b_channel_modify_maxclients

b_channel_modify_maxfamilyclients

b_channel_modify_sortorder

b_channel_modify_needed_talk_power

i_channel_modify_power

i_channel_needed_modify_power

Syntax

channeledit cid={channelID} [channel_properties...]

Example

channeledit cid=15 channel_codec_quality=3 channel_description=My\sDescription
 error id=0 msg=ok

CHANNELGROUPLIST

Displays a list of channel groups available on the selected virtual server.

Permissions:

b_virtualserver_channelgroup_list

b_serverinstance_modify_templates

Syntax:

channelgrouplist

Example:

channelgrouplist

cgid=1 name=Channel\sAdmin type=2 iconid=100 savedb=1|cgid=2 ... error id=0 msg=ok

CHANNELGROUPADD

Creates a new channel group using a given name and displays its ID. The optional type parameter can be used to create ServerQuery groups and template groups.

For detailed information, see **Definitions**.

Permissions:

b_virtualserver_channelgroup_create

Syntax:

channelgroupadd name={groupName} [type={groupDbType}]

Example:

channelgroupadd name=Channel\sAdmin
 cgid=13
 error id=0 msg=ok

CHANNELGROUPDEL

Deletes a channel group by ID. If force is set to 1, the channel group will be deleted even if there are clients within.

Permissions:

b_virtualserver_channelgroup_delete

Syntax

channelgroupdel cgid={groupID} force={1|0}

Example:

channelgroupdel cgid=13 error id=0 msg=ok

CHANNELGROUPCOPY

Creates a copy of the channel group specified with scgid. If tcgid is set to 0, the server will create a new group. To overwrite an existing group, simply set tcgid to the ID of a designated target group. If a target group is set, the name parameter will be ignored. The type parameter can be used to create ServerQuery groups and template groups.

For detailed information, see **Definitions**.

Permissions:

b_virtualserver_channelgroup_create i_group_modify_power i_group_needed_modify_power

Syntax

 $channel group copy \ scgid = \{source Group ID\} \ tsgid = \{target Group ID\} \ name = \{group Name\} \ type = \{group Db Type\} \ name = \{group Name\} \ type = \{group Db Type\} \ name = \{group Name\} \ type = \{group Db Type\} \ name = \{group Name\} \ type = \{group Db Type\} \ name = \{group Name\} \ type = \{group Name\} \ type = \{group Db Type\} \ name = \{group Name\} \ type = \{group Db Type\} \ name = \{group Name\} \ type = \{group Db Type\} \ name = \{group Name\} \ type = \{group Name\} \ type = \{group Db Type\} \ name = \{group Name\} \ type =$

Example:

```
channelgroupcopy scgid=4 tcgid=0 name=My\sGroup\s(Copy) type=1 cgid=33 error id=0 msg=ok
```

CHANNELGROUPRENAME

Changes the name of a specified channel group.

Permissions:

i_group_modify_power i_group_needed_modify_power

Syntax:

channelgrouprename cgid={groupID} name={groupName}

```
channelgrouprename cgid=13 name=New\sName
error id=0 msg=ok
```

CHANNELGROUPADDPERM

Adds a set of specified permissions to a channel group. Multiple permissions can be added by providing the two parameters of each permission. A permission can be specified by permid or permid.

Permissions:

i_group_modify_power
i_group_needed_modify_power
i_permission_modify_power

Syntax:

 $channel group addperm \ cgid=\{group ID\} \ [permid=\{perm ID\}...] \ [permsid=\{perm Name\}...] \ perm value=\{perm Value\}...] \ permid=\{perm Value\}...]$

Example.

channelgroupaddperm cgid=13 permid=17276 permvalue=50|permid=21415 permvalue=20
 error id=0 msg=ok

CHANNELGROUPPERMLIST

Displays a list of permissions assigned to the channel group specified with cgid. If the -permsid option is specified, the output will contain the permission names instead of the internal IDs.

Permissions:

b_virtualserver_channelgroup_permission_list

Syntax

channelgrouppermlist cgid={groupID} [-permsid]

Example:

channelgrouppermlist cgid=13
 permid=8470 permvalue=1 permnegated=0 permskip=0|permid=8475 permvalue=1 ...
 error id=0 msg=ok

CHANNELGROUPDELPERM

Removes a set of specified permissions from the channel group. Multiple permissions can be removed at once. A permission can be specified by permid or permid.

Permissions:

i_group_modify_power
i_group_needed_modify_power
i_permission_modify_power

Syntax:

 $channel group delperm \ cgid=\{group ID\} \ [permid=\{perm ID\}...] \ [perm sid=\{perm Name\}...]$

Example:

channelgroupdelperm cgid=16 permid=17276|permid=21415
 error id=0 msg=ok

CHANNELGROUPCLIENTLIST

Displays all the client and/or channel IDs currently assigned to channel groups. All three parameters are optional so you're free to choose the most suitable combination for your requirements.

Permissions:

b_virtualserver_channelgroup_client_list

Syntax:

channelgroupclientlist [cid={channelID}] [cldbid={clientDBID}] [cgid={groupID}]

```
channelgroupclientlist cid=2 cgid=9
  cid=2 cldbid=9 cgid=9|cid=2 cldbid=24 cgid=9|cid=2 cldbid=47 cgid=9
  error id=0 msg=ok
```

SETCLIENTCHANNELGROUP

Sets the channel group of a client to the ID specified with cgid.

Permissions:

i_group_member_add_power i_group_needed_member_add_power i_group_member_remove_power i_group_needed_member_remove_power

Syntax

setclientchannelgroup cgid={groupID} cid={channelID} cldbid={clientDBID}

Example:

setclientchannelgroup cgid=13 cid=15 cldbid=20
error id=0 msg=ok

CHANNELPERMLIST

Displays a list of permissions defined for a channel.

Permissions:

b_virtualserver_channel_permission_list

Syntax

channelpermlist cid={channelID} [-permsid]

Example:

channelpermlist cid=2
 cid=2 permid=4353 permvalue=1 permnegated=0 permskip=0|permid=17276 permvalue=50 ...
 error id=0 msg=ok

CHANNELADDPERM

Adds a set of specified permissions to a channel. Multiple permissions can be added by providing the two parameters of each permission. A permission can be specified by permid or permsid.

Permissions:

i_group_modify_power i_group_needed_modify_power i_permission_modify_power

Syntax:

channeladdperm cid={channelID} [permid={permID}...] [permsid={permName}...] permvalue={permValue}...

Example:

channeladdperm cid=16 permid=17276 permvalue=50|permid=21415 permvalue=20
 error id=0 msg=ok

CHANNELDELPERM

Removes a set of specified permissions from a channel. Multiple permissions can be removed at once. A permission can be specified by permid or permsid.

Permissions:

i_group_modify_power
i_group_needed_modify_power
i_permission_modify_power

Syntax:

channeldelperm cid=123 [permid={permID}...] [permsid={permName}...]

Example:

channeldelperm cid=16 permid=17276|permid=21415
error id=0 msg=ok

CLIENTLIST

Displays a list of clients online on a virtual server including their ID, nickname, status flags, etc. The output can be modified using several command options.

Please note that the output will only contain clients which are currently in channels you're able to subscribe to.

Permissions:

b_virtualserver_client_list i_channel_subscribe_power i_channel_needed_subscribe_power

Syntax:

clientlist [-uid] [-away] [-voice] [-times] [-groups] [-info] [-icon] [-country] [-ip]

Example:

```
clientlist -away
  clid=5 cid=7 client_database_id=40 client_nickname=ScP client_type=0 client_away=1
  client_away_message=not\shere|clid=6 ...
  error id=0 msg=ok
```

CLIENTINFO

Displays detailed configuration information about a client including unique ID, nickname, client version, etc.

Permissions:

b_client_info_view

Syntax

clientinfo clid={clientID}

Example:

```
clientinfo clid=6
  client_unique_identifier=P5H2hrN6+gpQI4n\/dXp3p17vtY0= client_nickname=Rabe85 client_version=3.0.0-
  alpha24\s[Build:\s8785]\s(UI:\s8785) ...
  error id=0 msg=ok
```

CLIENTFIND

Displays a list of clients matching a given name pattern.

Permissions:

b_virtualserver_client_search

Syntax:

clientfind pattern={clientName}

Example:

```
clientfind pattern=sven
  clid=7 client_nickname=Sven
  error id=0 msg=ok
```

CLIENTEDIT

Changes a clients settings using given properties.

For detailed information, see Client Properties.

Permissions:

b_client_modify_description b_client_set_talk_power

Syntax:

clientedit clid={clientID} [client_properties...]

```
clientedit clid=10 client_description=Best\sguy\sever!
  error id=0 msg=ok
```

CLIENTDBLIST

Displays a list of client identities known by the server including their database ID, last nickname, etc.

Permissions:

b_virtualserver_client_dblist

Syntax:

clientdblist [start={offset}] [duration={limit}] [-count]

Example:

clientdblist

cldbid=7 client_unique_identifier=DZhdQU58qyooEK4Fr8Ly738hEmc= client_nickname=MuhChy client_created=1259147468
client_lastconnected=1259421233 error id=0 msg=ok

CLIENTDBINFO

Displays detailed database information about a client including unique ID, creation date, etc.

Permissions:

b_virtualserver_client_dbinfo

Syntax:

clientdbinfo cldbid={clientDBID}

Example:

clientdbfind cldbid=4

 $\label{limit_continuous} {\tt client_unique_identifier=FPMPSC6MXqXq751dX7BKV0JniSo=client_nickname=ScP\ client_created=1265411019\ error\ id=0\ msg=ok$

CLIENTDBFIND

Displays a list of client database IDs matching a given pattern. You can either search for a clients last known nickname or his unique identity by using the -uid option.

Permissions:

b_virtualserver_client_dbsearch

Syntax:

clientdbfind pattern={clientName|clientUID} [-uid]

Example:

clientdbfind pattern=sven
 cldbid=56
 error id=0 msq=ok

CLIENTDBEDIT

Changes a clients settings using given properties.

For detailed information, see Client Properties.

Permissions:

b_client_modify_dbproperties b_client_modify_description b_client_set_talk_power

Syntax:

clientdbedit cldbid={clientDBID} [client_properties...]

Example:

clientdbedit cldbid=56 client_description=Best\sguy\sever!
 error id=0 msg=ok

CLIENTDBDELETE

Deletes a clients properties from the database.

Permissions:

b_client_delete_dbproperties

Syntax:

clientdbdelete cldbid={clientDBID}

Example:

clientdbdelete cldbid=56
 error id=0 msg=ok

CLIENTGETIDS

Displays all client IDs matching the unique identifier specified by cluid.

Syntax:

clientgetids cluid={clientUID}

Example:

clientgetids cluid=dyjxkshZP6bz0n3bnwFQ1CkwZ0M=
 cluid=dyjxkshZP6bz0n3bnwFQ1CkwZ0M= clid=1 name=Janko
 error id=0 msg=ok

CLIENTGETDBIDFROMUID

Displays the database ID matching the unique identifier specified by cluid.

Syntax:

clientgetdbidfromuid cluid={clientUID}

Example:

clientgetdbidfromuid cluid=dyjxkshZP6bz0n3bnwFQ1CkwZ0M=
 cluid=dyjxkshZP6bz0n3bnwFQ1CkwZ0M= cldbid=32
 error id=0 msg=ok

CLIENTGETNAMEFROMUID

Displays the database ID and nickname matching the unique identifier specified by cluid.

Syntax:

clientgetnamefromuid cluid={clientUID}

Example:

clientgetnamefromuid cluid=dyjxkshZP6bz0n3bnwFQ1CkwZ0M=
 cluid=dyjxkshZP6bz0n3bnwFQ1CkwZ0M= cldbid=32 name=Janko
 error id=0 msg=ok

CLIENTGETNAMEFROMDBID

Displays the unique identifier and nickname matching the database ID specified by cldbid.

Syntax

clientgetnamefromdbid cldbid={clientDBID}

Example:

clientgetnamefromdbid cldbid=32
 cluid=dyjxkshZP6bz0n3bnwFQ1CkwZ0M= cldbid=32 name=Janko
 error id=0 msg=ok

CLIENTSETSERVERQUERYLOGIN

Updates your own *ServerQuery* login credentials using a specified username. The password will be autogenerated.

Permissions:

b_client_create_modify_serverquery_login

Syntax

clientsetserverquerylogin client_login_name={username}

Example:

clientsetserverquerylogin client_login_name=admin
 client_login_password=+r\/TQqvR
 error id=0 msg=ok

CLIENTUPDATE

Change your ServerQuery clients settings using given properties.

For detailed information, see Client Properties.

Syntax:

clientupdate [client_properties...]

Example:

clientupdate client_nickname=ScP\s(query)
 error id=0 msg=ok

CLIENTMOVE

Moves one or more clients specified with clid to the channel with ID cid. If the target channel has a password, it needs to be specified with cpw. If the channel has no password, the parameter can be omitted.

Permissions:

i_client_move_power i_client_needed_move_power

Syntax:

clientmove clid={clientID}... cid={channelID} [cpw={channelPassword}]

Example:

clientmove clid=5|clid=6 cid=3
 error id=0 msg=ok

CLIENTKICK

Kicks one or more clients specified with clid from their currently joined channel or from the server, depending on reasonid. The reasonmsg parameter specifies a text message sent to the kicked clients. This parameter is optional and may only have a maximum of 40 characters.

For detailed information, see **Definitions**.

Permissions:

i_client_kick_from_server_power i_client_kick_from_channel_power i_client_needed_kick_from_server_power i_client_needed_kick_from_channel_power

Syntax:

clientkick clid={clientID}... reasonid={4|5} [reasonmsg={text}]

Example:

clientkick clid=5|clid=6 reasonid=4 reasonmsg=Go\saway!
error id=0 msg=ok

CLIENTPOKE

Sends a poke message to the client specified with clid.

Permissions:

i_client_poke_power i_client_needed_poke_power

Syntax:

clientpoke clid={clientID}... msg={text}

Example:

clientpoke clid=5 msg=Wake\sup!
error id=0 msg=ok

CLIENTPERMLIST

Displays a list of permissions defined for a client.

Permissions:

b_virtualserver_client_permission_list

Syntax:

clientpermlist cldbid={clientDBID} [-permsid]

Example:

clientpermlist cldbid=2
 cldbid=2 permid=4353 permvalue=1 permnegated=0 permskip=0|permid=17276 permvalue=50 permnegated=0
 permskip=0|permid=21415 ...
 error id=0 msg=ok

CLIENTADDPERM

Adds a set of specified permissions to a client. Multiple permissions can be added by providing the three parameters of each permission. A permission can be specified by permid or permsid.

Permissions:

i_group_modify_power i_group_needed_modify_power i_permission_modify_power

Syntax

clientaddperm cldbid={clientDBID} [permid={permID}...] [permsid={permName}...] permvalue={permValue}... permskip={1|0}...

Example:

clientaddperm cldbid=16 permid=17276 permvalue=50 permskip=1|permid=21415 permvalue=20 permskip=0 error id=0 msg=ok

CLIENTDELPERM

Removes a set of specified permissions from a client. Multiple permissions can be removed at once. A permission can be specified by permid or permsid.

Permissions:

i_group_modify_power
i_group_needed_modify_power
i_permission_modify_power

Syntax:

channeldelperm cldbid={clientDBID} [permid={permID}...] [permsid={permName}...]

Example:

clientdelperm cldbid=16 permid=17276|permid=21415
error id=0 msg=ok

CHANNELCLIENTPERMLIST

Displays a list of permissions defined for a client in a specific channel.

Permissions:

b_virtualserver_channelclient_permission_list

Syntax:

channelclientpermlist cid={channelID} cldbid={clientDBID} [-permsid]

Example:

channelclientpermlist cid=12 cldbid=3

 $\begin{array}{l} \text{cid=12 cldbid=3 permid=4353 permvalue=1 permnegated=0 permskip=0|permid=17276 permvalue=50 permnegated=0 permskip=0|permid=21415 \dots permid=21415 \dots permid=0 \\ \end{array}$

CHANNELCLIENTADDPERM

Adds a set of specified permissions to a client in a specific channel. Multiple permissions can be added by providing the three parameters of each permission. A permission can be specified by permid or permsid.

Permissions:

i_group_modify_power
i_group_needed_modify_power
i_permission_modify_power

Syntax:

 $channel \verb|clientaddperm| cid=\{channel ID\} | cldbid=\{clientDBID\} | [permid=\{permID\}...] | [permsid=\{permName\}...] | permvalue=\{permValue\}... | permvalue=\{permValue\}... | permsid=\{permValue\}... | permsid=\{permsid=\{permValue\}... | permsid=\{permValue\}... | permsid=\{permva$

Example:

channelclientaddperm cid=12 cldbid=3 permid=17276 permvalue=50|permid=21415 permvalue=20
 error id=0 msg=ok

CHANNELCLIENTDELPERM

Removes a set of specified permissions from a client in a specific channel. Multiple permissions can be removed at once. A permission can be specified by permid or permsid.

Permissions:

i_group_modify_power i_group_needed_modify_power i_permission_modify_power

Syntax:

channelclientdelperm cid={channelID} cldbid={clientDBID} [permid={permID}...] [permsid={permName}...]

Example

channelclientdelperm cid=12 cldbid=3 permid=17276|permid=21415
 error id=0 msg=ok

PERMISSIONLIST

Displays a list of permissions available on the server instance including ID, name and description.

Permissions:

b_serverinstance_permission_list

Syntax:

permissionlist

Example:

permissionlist

 $permid=21413\ permname=b_client_channel_textmessage_send\ permdesc=Send\stext\smessages\sto\schannel|permid=21414\permname=i_client_talk_power\ ...\end{array}$ $error\ id=0\ msg=ok$

PERMIDGETBYNAME

Displays the database ID of one or more permissions specified by permsid.

Permissions:

b_serverinstance_permission_list

Syntax:

permidgetbyname permsid={permName}...

Example:

permidgetbyname permsid=b_serverinstance_help_view|permsid=b_serverinstance_info_view
permsid=b_serverinstance_help_view permid=4353|permsid=b_serverinstance_info_view permid=4355
error id=0 msg=ok

PERMOVERVIEW

Displays all permissions assigned to a client for the channel specified with cid. If permid is set to 0, all permissions will be displayed. A permission can be specified by permid or permsid.

Permissions:

b_client_permissionoverview_view

Syntax:

permoverview cid={channelID} cldbid={clientDBID} [permid={permID}...] [permsid={permName}...]

Example:

```
permoverview cldbid=57 cid=74 permid=0
  t=0 id1=5 id2=0 p=37 v=1 n=0 s=0|t=0 id1=5 id2=0 p=38 v=1 n=0 s=0 ...
  error id=0 msg=ok
```

PERMGET

Displays the current value of the permission specified with permid or permsid for your own connection. This can be useful when you need to check your own privileges.

Permissions:

b_client_permissionoverview_own

Syntax:

```
permget permid={permID}
permget permsid={permName}
```

Example:

```
permget permid=21174
  permsid=i_client_move_power permid=21174 permvalue=100
  error id=0 msg=ok

permget permsid=i_client_move_power
  permsid=i_client_move_power permid=21174 permvalue=100
  error id=0 msg=ok
```

PERMFIND

Displays detailed information about all assignments of the permission specified with permid. The output is similar to permoverview which includes the type and the ID of the client, channel or group associated with the permission. A permission can be specified by permid or permsid.

Permissions:

b_virtualserver_permission_find b_serverinstance_permission_find

Syntax

```
permfind [permid={permID}...] [permsid={permName}...]
```

```
permfind permid=4353
  t=0 id1=1 id2=0 p=4353|t=0 id1=2 id2=0 p=4353
  error id=0 msg=ok
```

PERMRESET

Restores the default permission settings on the selected virtual server and creates a new initial administrator token. Please note that in case of an error during the permreset call - e.g. when the database has been modified or corrupted - the virtual server will be deleted from the database.

Permissions:

b_virtualserver_permission_reset

Syntax:

permreset

Example:

permreset
 token=eKnFZQ9EK7G7MhtuQB6+N2B1PNZZ60ZL3ycDp20W
 error id=0 msg=ok

PRIVILEGEKEYLIST

Displays a list of privilege keys available including their type and group IDs. Tokens can be used to gain access to specified server or channel groups.

A privilege key is similar to a client with administrator privileges that adds you to a certain permission group, but without the necessity of a such a client with administrator privileges to actually exist. It is a long (random looking) string that can be used as a ticket into a specific server group.

Permissions:

b_virtualserver_token_list

Syntax:

privilegekeylist

Example:

privilegekeylist
 token=88CVUg\/zkujt+y+WfHdko79UcM4R6uyCL6nEfy3B token_type=0 token_id1=9 token_id2=0 ...
 error id=0 msg=ok

PRIVILEGEKEYADD

Create a new token. If tokentype is set to 0, the ID specified with tokenid1 will be a server group ID. Otherwise, tokenid1 is used as a channel group ID and you need to provide a valid channel ID using tokenid2.

The tokencustomset parameter allows you to specify a set of custom client properties. This feature can be used when generating tokens to combine a website account database with a TeamSpeak user. The syntax of the value needs to be escaped using the ServerQuery escape patterns and has to follow the general syntax of:

ident=ident1 value=value1|ident=ident2 value=value2|ident=ident3 value=value3

Permissions:

b_virtualserver_token_add

Syntax

privilegekeyadd tokentype={1|0} tokenid1={groupID} tokenid2={channelID}
[tokendescription={description}] [tokencustomset={customFieldSet}]

Example:

tokenadd tokentype=0 tokenid1=6 tokenid2=0 tokendescription=Test\stoken\swith\scustom\sset
tokencustomset=ident=forum_user\svalue=Sven\sPaulsen\pident=forum_id\svalue=123
 token=eKnFZQ9EK7G7MhtuQB6+N2B1PNZZ60ZL3ycDp20W
 error id=0 msg=ok

PRIVILEGEKEYDELETE

Deletes an existing token matching the token key specified with token.

Permissions:

b_virtualserver_token_delete

Syntax:

privilegekeydelete token={tokenKey}

Example:

$$\label{eq:privilegekeydelete} \begin{split} & privilegekeydelete \ token=eKnFZQ9EK7G7MhtuQB6+N2B1PNZZ60ZL3ycDp20W \\ & error \ id=0 \ msg=ok \end{split}$$

PRIVILEGEKEYUSE

Use a token key gain access to a server or channel group. Please note that the server will automatically delete the token after it has been used.

Permissions:

b_virtualserver_token_use

Syntax:

privilegekeyuse token={tokenKey}

Example:

privilegekeyuse token=eKnFZQ9EK7G7MhtuQB6+N2B1PNZZ6OZL3ycDp2OW
 error id=0 msa=ok

MESSAGELIST

Displays a list of offline messages you've received. The output contains the senders unique identifier, the messages subject, etc.

Syntax:

messagelist

Example:

messagelist

msgid=4 cluid=xwEzb5ENOaglVHu9oelK++reUyE= subject=Test timestamp=1259439465 flag_read=0 ... error id=0 msg=ok

MESSAGEADD

Sends an offline message to the client specified by cluid.

Syntax:

messageadd cluid={clientUID} subject={subject} message={text}

Example:

MESSAGEDEL

Deletes an existing offline message with ID msgid from your inbox.

Syntax:

messagedel msgid={messageID}

Example:

messagedel msgid=4 error id=0 msg=ok

MESSAGEGET

Displays an existing offline message with ID msgid from your inbox. Please note that this does not automatically set the flag_read property of the message.

Syntax:

messageget msgid={messageID}

Example:

messageget msgid=4
msgid=4 cluid=xwEzb5ENOaglVHu9oelK++reUyE= subject=Hi! message=Where\aare\syou?!?
error id=0 msg=ok

MESSAGEUPDATEFLAG

Updates the flag_read property of the offline message specified with msgid. If flag is set to 1, the message will be marked as read.

Syntax:

messageupdateflag msgid={messageID} flag={1|0}

Example:

messageupdateflag msgid=4 flag=1
error id=0 msg=ok

COMPLAINLIST

Displays a list of complaints on the selected virtual server. If tcldbid is specified, only complaints about the targeted client will be shown.

Permissions:

b_client_complain_list

Syntax:

complainlist [tcldbid={targetClientDBID}]

Example:

```
complainlist tcldbid=3
  tcldbid=3 tname=Julian fcldbid=56 fname=Sven message=Bad\sguy! timestamp=1259440948 ...
  error id=0 msg=ok
```

COMPLAINADD

Submits a complaint about the client with database ID tcldbid to the server.

Permissions:

i_client_complain_power i_client_needed_complain_power

Syntax

complainadd tcldbid={targetClientDBID} message={text}

Example:

```
complainadd tcldbid=3 message=Bad\sguy!
error id=0 msg=ok
```

COMPLAINDELALL

Deletes all complaints about the client with database ID ${\tt tcldbid}$ from the server.

Permissions:

b_client_complain_delete

Syntax:

complaindelall tcldbid={targetClientDBID}

```
complaindelall tcldbid=3
error id=0 msg=ok
```

COMPLAINDEL

Deletes the complaint about the client with ID tcldbid submitted by the client with ID fcldbid from the server.

Permissions:

b_client_complain_delete b_client_complain_delete_own

Syntax:

complaindel tcldbid={targetClientDBID} fcldbid={fromClientDBID}

Example

```
complaindel tcldbid=3 fcldbid=4
error id=0 msg=ok
```

BANCLIENT

Bans the client specified with ID clid from the server. Please note that this will create two separate ban rules for the targeted clients IP address and his unique identifier.

Permissions:

i_client_ban_power i_client_needed_ban_power

Syntax:

banclient clid={clientID} [time={timeInSeconds}] [banreason={text}]

Example:

```
banclient clid=4 time=3600
banid=2
banid=3
error id=0 msg=ok
```

BANLIST

Displays a list of active bans on the selected virtual server.

Permissions:

b_client_ban_list

Syntax:

banlist

Example:

banlist

```
banid=7 ip=1.2.3.4 created=1259444002242 invokername=Sven invokercldbid=56 invokeruid=oHhi9WzXLNEFQOwAu4JYKGU+C+c= reason enforcements=0 error id=0 msg=ok
```

BANADD

Adds a new ban rule on the selected virtual server. All parameters are optional but at least one of the following must be set: ip, name, or uid.

Permissions:

b_client_ban_create

Syntax:

```
banadd [ip={regexp}] [name={regexp}] [uid={clientUID}]
[time={timeInSeconds}] [banreason={text}]
```

```
banadd ip=1.2.3.4 banreason=just\s4\sfun
banid=1
error id=0 msg=ok
```

BANDEL

Deletes the ban rule with ID banid from the server.

Permissions:

b_client_ban_delete b_client_ban_delete_own

Syntax:

bandel banid={banID}

Example:

bandel banid=3
error id=0 msg=ok

BANDELALL

Deletes all active ban rules from the server.

Permissions:

b_client_ban_delete

Syntax:

bandelal1

Example:

bandelal1

error id=0 msg=ok

FTINITUPLOAD

Initializes a file transfer upload. clientftfid is an arbitrary ID to identify the file transfer on client-side. On success, the server generates a new ftkey which is required to start uploading the file through *TeamSpeak 3*'s file transfer interface.

Permissions:

i_ft_file_upload_power i_ft_needed_file_ upload _power i_ft_quota_mb_upload_per_client

Syntax:

ftinitupload clientftfid={clientFileTransferID} name={filePath} cid={channelID} cpw={channelPassword} size={fileSize} overwrite={1|0} resume={1|0}

Example:

ftinitupload clientftfid=1 name=\/image.iso cid=5 cpw= size=673460224 overwrite=1 resume=0 clientftfid=1 serverftfid=6 ftkey=itRNdsIOvcBiBg\/Xj4Ge51ZSrsShHuid port=30033 seekpos=0 error id=0 msg=ok

FTINITDOWNLOAD

Initializes a file transfer download. clientftfid is an arbitrary ID to identify the file transfer on client-side. On success, the server generates a new ftkey which is required to start downloading the file through *TeamSpeak 3*'s file transfer interface.

Permissions:

i_ft_file_download_power
i_ft_needed_file_download_power
i_ft_quota_mb_download_per_client

Syntax:

ftinitdownload clientftfid={clientFileTransferID} name={filePath} cid={channelID}
cpw={channelPassword} seekpos={seekPosition}

Example:

ftinitdownload clientftfid=1 name=\/image.iso cid=5 cpw= seekpos=0 clientftfid=1 serverftfid=7 ftkey=NrOga\/4d2GpYC5oKgxuclT037X83ca\/1 port=30033 size=673460224 error id=0 msg=ok

FTLIST

Displays a list of running file transfers on the selected virtual server. The output contains the path to which a file is uploaded to, the current transfer rate in bytes per second, etc.

Permissions:

b_ft_transfer_list

Syntax:

ftlist

Example:

ftlist

clid=2 path=files\/virtualserver_1\/channel_5 name=image.iso size=673460224 sizedone=450756 clientftfid=2
serverftfid=6 sender=0 status=1 current_speed=60872.8 ...
error id=0 msq=ok

FTGETFILELIST

Displays a list of files and directories stored in the specified channels file repository.

Permissions:

i_ft_file_browse_power i_ft_needed_file_browse_power

Syntax:

ftgetfilelist cid={channelID} cpw={channelPassword} path={filePath}

Example:

```
ftgetfilelist cid=2 cpw= path=\/
  cid=2 path=\/ name=Stuff size=0 datetime=1259415210 type=0|name=Pic1.PNG size=563783 datetime=1259425462
  type=1|name=Pic2.PNG ...
  error id=0 msd=ok
```

FTGETFILEINFO

Displays detailed information about one or more specified files stored in a channels file repository.

Permissions:

i_ft_file_browse_power
i_ft_needed_file_browse_power

Syntax:

ftgetfileinfo cid={channelID} cpw={channelPassword} name={filePath}...

Example:

```
ftgetfileinfo cid=2 cpw= path=\/Pic1.PNG|cid=2 cpw= path=\/Pic2.PNG cid=2 path=\/ name=Stuff size=0 datetime=1259415210 type=0|name=Pic1.PNG size=563783 datetime=1259425462 type=1|name=Pic2.PNG ... error id=0 msg=ok
```

FTSTOP

Stops the running file transfer with server-side ID serverftfid.

Syntax:

ftstop serverftfid={serverFileTransferID} delete={1|0}

Example:

```
ftstop serverftfid=2 delete=1
  error id=0 msg=ok
```

FTDELETEFILE

Deletes one or more files stored in a channels file repository.

Permissions:

i_ft_file_delete_power
i_ft_needed_file_delete_power

Syntax:

ftdeletefile cid={channelID} cpw={channelPassword} name={filePath}...

Example:

ftdeletefile cid=2 cpw= name=\/Pic1.PNG|name=\/Pic2.PNG
error id=0 msg=ok

FTCREATEDIR

Creates new directory in a channels file repository.

Permissions:

i_ft_directory_create_power i_ft_needed_file_directory_create_power

Syntax:

ftcreatedir cid={channelID} cpw={channelPassword} dirname={dirPath}

Example:

ftcreatedir cid=2 cpw= dirname=\/My\sDirectory error id=0 msg=ok

FTRENAMEFILE

Renames a file in a channels file repository. If the two parameters told and topw are specified, the file will be moved into another channels file repository.

Permissions:

i_ft_file_rename_power
i_ft_needed_file_rename_power

Syntax:

ftrenamefile cid={channelID} cpw={channelPassword} [tcid={targetChannelID}]
[tcpw={targetChannelPassword}] oldname={oldFilePath} newname={newFilePath}

Example:

CUSTOMSEARCH

Searches for custom client properties specified by ident and value. The value parameter can include regular characters and SQL wildcard characters (e.g. %).

Syntax:

customsearch ident={ident} pattern={pattern}

Example:

customsearch ident=forum_account pattern=%ScP%
 cldbid=2 ident=forum_account value=ScP
 error id=0 msg=ok

CUSTOMINFO

Displays a list of custom properties for the client specified with cldbid.

Syntax:

custominfo cldbid={clientDBID}

Example:

custominfo cldbid=3
 cldbid=3 ident=forum_account value=ScP|ident=forum_id value=123
 error id=0 msg=ok

WHOAMI

Displays information about your current ServerQuery connection including your loginname, etc.

Syntax:

whoami

Example:

whoami

 $\label{lem:continuous} virtuals erver_id=1 \ virtuals erver_unique_identifier=zrPkjznB1tMnRwj01xx7RxXjqeY=client_channel_id=2 \dots \\ error \ id=0 \ msg=ok$

SERVER INSTANCE PROPERTIES

This is a list of properties available for the server instance:

Uptime in seconds HOST_TIMESTAMP_UTC Current server date and time as UTC timestamp VIRTUALSERVERS_RUNNING_TOTAL Number of virtual servers running CONNECTION_FILETRANSFER_BANDWIDTH_SENT Current bandwidth used for outgoing file transfers (Bytes/s) CONNECTION_FILETRANSFER_BANDWIDTH_RECEIVED Current bandwidth used for incoming file transfers (Bytes/s) CONNECTION_PACKETS_SENT_TOTAL Total amount of packets sent CONNECTION_PACKETS_RECEIVED_TOTAL Total amount of packets received CONNECTION_BYTES_RECEIVED_TOTAL Total amount of bytes sent CONNECTION_BYTES_RECEIVED_TOTAL Total amount of bytes received CONNECTION_BYTES_RECEIVED_TOTAL Total amount of bytes received CONNECTION_BYTES_RECEIVED_TOTAL Average bandwidth used for outgoing data in the last second (Bytes/s) CONNECTION_BANDWIDTH_SENT_LAST_SECOND_TOTAL Average bandwidth used for outgoing data in the last second (Bytes/s) CONNECTION_BANDWIDTH_RECEIVED_LAST_SECOND_TOTAL Average bandwidth used for incoming data in the last second (Bytes/s) CONNECTION_BANDWIDTH_SENT_LAST_MINUTE_TOTAL Average bandwidth used for outgoing data in the last second (Bytes/s) CONNECTION_BANDWIDTH_RECEIVED_LAST_MINUTE_TOTAL Average bandwidth used for incoming data in the last second (Bytes/s) CONNECTION_BANDWIDTH_RECEIVED_LAST_MINUTE_TOTAL Average bandwidth used for incoming data in the last minute (Bytes/s) SERVERINSTANCE_DATABASE_VERSION Database revision number SERVERINSTANCE_DATABASE_VERSION Default serverQuery group ID SERVERINSTANCE_TEMPLATE_SERVERADMIN_GROUP Default ServerQuery group ID for administrators on new virtual servers (used to create initial token) SERVERINSTANCE_TEMPLATE_SERVERADMIN_GROUP Default server group ID used in templates SERVERINSTANCE_TEMPLATE_SERVERADMIN_GROUP Default channel group ID used in templates SERVERINSTANCE_TEMPLATE_SERVERADMIN_GROUP Default channel group ID used in templates SERVERINSTANCE_TEMPLATE_CHANNELDEFAULT_GROUP Default channel group ID used in templates	No
HOST_TIMESTAMP_UTC Current server date and time as UTC timestamp VIRTUALSERVERS, RUNNING_TOTAL Number of virtual servers running CONNECTION_FILETRANSFER_BANDWIDTH_SENT Current bandwidth used for outgoing file transfers (Bytes/s) CONNECTION_FILETRANSFER_BANDWIDTH_RECEIVED Current bandwidth used for incoming_file transfers (Bytes/s) CONNECTION_PACKETS_SENT_TOTAL Total amount of packets sent CONNECTION_PACKETS_RECEIVED_TOTAL Total amount of packets received CONNECTION_BYTES_SENT_TOTAL Total amount of bytes sent CONNECTION_BYTES_SENT_TOTAL Total amount of bytes sent CONNECTION_BYTES_RECEIVED_TOTAL Total amount of bytes received CONNECTION_BANDWIDTH_SENT_LAST_SECOND_TOTAL Average bandwidth used for outgoing data in the last second (Bytes/s) CONNECTION_BANDWIDTH_SENT_LAST_SECOND_TOTAL Average bandwidth used for outgoing data in the last second (Bytes/s) CONNECTION_BANDWIDTH_RECEIVED_LAST_SECOND_TOTAL Average bandwidth used for outgoing data in the last second (Bytes/s) CONNECTION_BANDWIDTH_SENT_LAST_MINUTE_TOTAL Average bandwidth used for outgoing data in the last minute (Bytes/s) CONNECTION_BANDWIDTH_SENT_LAST_MINUTE_TOTAL Average bandwidth used for outgoing data in the last minute (Bytes/s) CONNECTION_BANDWIDTH_SENT_LAST_MINUTE_TOTAL Average bandwidth used for outgoing data in the last minute (Bytes/s) SERVERINSTANCE_DATABASE_VERSION Database revision number SERVERINSTANCE_GUEST_SERVERQUERY_GROUP Default serverQuery group ID SERVERINSTANCE_GUEST_SERVERQUERY_GROUP Default template group ID for administrators on new virtual servers (used to create initial token) SERVERINSTANCE_GUEST_SERVERQUERY_GROUP Default template group ID for administrators on new virtual servers (used to create initial token) SERVERINSTANCE_TEMPLATE_SERVERDEFAULT_GROUP Default template group ID for administrators on new virtual servers (used to create initial token) SERVERINSTANCE_TEMPLATE_CHANNELDEFAULT_GROUP Default channel administrator group ID used in templates SERVERINSTANCE_TEMPLATE_CHANNELDEFAULT_GROUP Default channel administrat	10
Current server date and time as UTC timestamp VIRTUALSERVERS, RUNNING, TOTAL Number of virtual servers running CONNECTION_FILETRANSFER_BANDWIDTH_SENT Current bandwidth used for outgoing file transfers (Bytes/s) CONNECTION_FILETRANSFER_BANDWIDTH_RECEIVED Current bandwidth used for incoming file transfers (Bytes/s) CONNECTION_PACKETS_SENT_TOTAL Total amount of packets sent CONNECTION_PACKETS_RECEIVED_TOTAL Total amount of packets received CONNECTION_BYTES_SENT_TOTAL Total amount of bytes sent CONNECTION_BYTES_RECEIVED_TOTAL Total amount of bytes sent CONNECTION_BYTES_RECEIVED_TOTAL Total amount of bytes received CONNECTION_BYTES_RECEIVED_TOTAL Average bandwidth used for outgoing data in the last second (Bytes/s) CONNECTION_BANDWIDTH_SENT_LAST_SECOND_TOTAL Average bandwidth used for incoming data in the last second (Bytes/s) CONNECTION_BANDWIDTH_RECEIVED_LAST_SECOND_TOTAL Average bandwidth used for incoming data in the last second (Bytes/s) CONNECTION_BANDWIDTH_SENT_LAST_MINUTE_TOTAL Average bandwidth used for outgoing data in the last minute (Bytes/s) CONNECTION_BANDWIDTH_RECEIVED_LAST_MINUTE_TOTAL Average bandwidth used for incoming data in the last minute (Bytes/s) CONNECTION_BANDWIDTH_RECEIVED_LAST_MINUTE_TOTAL Average bandwidth used for incoming data in the last minute (Bytes/s) SERVERINSTANCE_DATABASE_VERSION Database revision number SERVERINSTANCE_DATABASE_VERSION Database revision number SERVERINSTANCE_TEMPLATE_SERVERADMIN_GROUP Default serverQuery group ID SERVERINSTANCE_TEMPLATE_SERVERADMIN_GROUP Default template group ID for administrators on new virtual servers (used to create initial token) SERVERINSTANCE_TEMPLATE_SERVERADMIN_GROUP Default servery group ID used in templates SERVERINSTANCE_TEMPLATE_CHANNELDEFAULT_GROUP Default channel group ID used in templates SERVERINSTANCE_TEMPLATE_CHANNELDEFAULT_GROUP Default channel administrator group ID used in templates VIRTUALSERVERS_TOTAL_MAXCLIENTS	
VIRTUALSERVERS_RUNNING_TOTAL Number of virtual servers running CONNECTION_FILETRANSFER_BANDWIDTH_SENT Current bandwidth used for outgoing file transfers (Bytes/s) CONNECTION_FILETRANSFER_BANDWIDTH_RECEIVED Current bandwidth used for incoming file transfers (Bytes/s) CONNECTION_PACKETS_SENT_TOTAL Total amount of packets sent CONNECTION_PACKETS_SENT_TOTAL Total amount of packets received CONNECTION_BYTES_SENT_TOTAL Total amount of bytes sent CONNECTION_BYTES_SENT_TOTAL Total amount of bytes sent CONNECTION_BYTES_SENT_TOTAL Total amount of bytes sent CONNECTION_BYTES_RECEIVED_TOTAL Total amount of bytes received CONNECTION_BYTES_RECEIVED_TOTAL Total amount of bytes received CONNECTION_BANDWIDTH_SENT_LAST_SECOND_TOTAL Average bandwidth used for outgoing data in the last second (Bytes/s) CONNECTION_BANDWIDTH_RECEIVED_LAST_SECOND_TOTAL Average bandwidth used for incoming data in the last second (Bytes/s) CONNECTION_BANDWIDTH_SENT_LAST_MINUTE_TOTAL Average bandwidth used for incoming data in the last minute (Bytes/s) CONNECTION_BANDWIDTH_RECEIVED_LAST_MINUTE_TOTAL Average bandwidth used for incoming data in the last minute (Bytes/s) CONNECTION_BANDWIDTH_RECEIVED_LAST_MINUTE_TOTAL Average bandwidth used for incoming data in the last minute (Bytes/s) SERVERINSTANCE_DATABASE_VERSION Database revision number SERVERINSTANCE_GUEST_SERVERQUERY_GROUP Default serverQuery group ID SERVERINSTANCE_TEMPLATE_SERVERADMIN_GROUP Default template group ID for administrators on new virtual servers (used to create initial token) SERVERINSTANCE_TEMPLATE_SERVERADMIN_GROUP Default serverQuery group ID Max bandwidth available for incoming file transfers (Bytes/s) SERVERINSTANCE_TEMPLATE_SERVERDEFAULT_GROUP Default template group ID used in templates SERVERINSTANCE_TEMPLATE_CHANNELDEFAULT_GROUP Default channel administrator group ID used in templates VIRTUALSERVERS_TOTAL_MAXCLIENTS	No
CONNECTION_FILETRANSFER_BANDWIDTH_SENT Current bandwidth used for outgoing file transfers (Bytes/s) CONNECTION_FILETRANSFER_BANDWIDTH_RECEIVED Current bandwidth used for incoming file transfers (Bytes/s) CONNECTION_PACKETS_SENT_TOTAL Total amount of packets sent CONNECTION_PACKETS_SENT_TOTAL Total amount of packets received CONNECTION_PACKETS_RECEIVED_TOTAL Total amount of packets received CONNECTION_BYTES_SENT_TOTAL Total amount of bytes sent CONNECTION_BYTES_RECEIVED_TOTAL Total amount of bytes received CONNECTION_BANDWIDTH_RECEIVED_LAST_SECOND_TOTAL Average bandwidth used for outgoing data in the last second (Bytes/s) CONNECTION_BANDWIDTH_RECEIVED_LAST_SECOND_TOTAL Average bandwidth used for incoming data in the last second (Bytes/s) CONNECTION_BANDWIDTH_RECEIVED_LAST_MINUTE_TOTAL Average bandwidth used for outgoing data in the last minute (Bytes/s) CONNECTION_BANDWIDTH_RECEIVED_LAST_MINUTE_TOTAL Average bandwidth used for incoming data in the last minute (Bytes/s) CONNECTION_BANDWIDTH_RECEIVED_LAST_MINUTE_TOTAL Average bandwidth used for incoming data in the last minute (Bytes/s) SERVERINSTANCE_DATABASE_VERSION Database revision number SERVERINSTANCE_DATABASE_VERSION Database revision number SERVERINSTANCE_GUEST_SERVERQUERY_GROUP Default template group ID for administrators on new virtual servers (used to create initial token) SERVERINSTANCE_TEMPLATE_SERVERADMIN_GROUP Default template group ID for moming file transfers (Bytes/s) SERVERINSTANCE_TEMPLATE_SERVERDEFAULT_GROUP Default server group ID used in templates SERVERINSTANCE_TEMPLATE_CHANNELDEFAULT_GROUP Default channel group ID used in templates SERVERINSTANCE_TEMPLATE_CHANNELDEFAULT_GROUP Default channel administrator group ID used in templates VIRTUALSERVERS_TOTAL_MAXCLIENTS	
CONNECTION_FILETRANSFER_BANDWIDTH_SENT Current bandwidth used for outgoing file transfers (Bytes/s) CONNECTION_FILETRANSFER_BANDWIDTH_RECEIVED Current bandwidth used for incoming file transfers (Bytes/s) CONNECTION_PACKETS_SENT_TOTAL Total amount of packets sent CONNECTION_PACKETS_RECEIVED_TOTAL Total amount of packets received CONNECTION_BYTES_SENT_TOTAL Total amount of bytes sent CONNECTION_BYTES_SENT_TOTAL Total amount of bytes sent CONNECTION_BYTES_RECEIVED_TOTAL Total amount of bytes received CONNECTION_BYTES_RECEIVED_TOTAL Total amount of bytes received CONNECTION_BANDWIDTH_SENT_LAST_SECOND_TOTAL Average bandwidth used for outgoing data in the last second (Bytes/s) CONNECTION_BANDWIDTH_RECEIVED_LAST_SECOND_TOTAL Average bandwidth used for incoming data in the last second (Bytes/s) CONNECTION_BANDWIDTH_RECEIVED_LAST_SECOND_TOTAL Average bandwidth used for outgoing data in the last minute (Bytes/s) CONNECTION_BANDWIDTH_RECEIVED_LAST_MINUTE_TOTAL Average bandwidth used for outgoing data in the last minute (Bytes/s) CONNECTION_BANDWIDTH_RECEIVED_LAST_MINUTE_TOTAL Average bandwidth used for incoming data in the last minute (Bytes/s) SERVERINSTANCE_DATABASE_VERSION Database revision number SERVERINSTANCE_GUEST_SERVERQUERY_GROUP Default ServerQuery group ID SERVERINSTANCE_TEMPLATE_SERVERADMIN_GROUP Default template group ID for administrators on new virtual servers (used to create initial token) SERVERINSTANCE_MAX_DOWNLOAD_TOTAL_BANDWITDH Max bandwidth available for incoming file transfers (Bytes/s) SERVERINSTANCE_MAX_UPLOAD_TOTAL_BANDWITDH Max bandwidth available for incoming file transfers (Bytes/s) SERVERINSTANCE_TEMPLATE_SERVERDEFAULT_GROUP Default templates SERVERINSTANCE_TEMPLATE_SERVERDEFAULT_GROUP Default tennel administrator or nemplates SERVERINSTANCE_TEMPLATE_CHANNELDEFAULT_GROUP Default tennel administrator or nemplates SERVERINSTANCE_TEMPLATE_CHANNELDEFAULT_GROUP Default channel administrator or nemplates VIRTUALSERVERS_TOTAL_MAXCLIENTS	No
CURRECTION, FILETRANSFER, BANDWIDTH, RECEIVED CUrrent bandwidth used for incoming file transfers (Bytes/s) CONNECTION, PACKETS, SENT_TOTAL Total amount of packets sent CONNECTION, PACKETS, SENT_TOTAL Total amount of packets sent CONNECTION, BACKETS, RECEIVED_TOTAL Total amount of packets received CONNECTION, BYTES, SENT_TOTAL Total amount of bytes sent CONNECTION, BYTES, SENT_TOTAL Total amount of bytes sent CONNECTION, BYTES, SECIVED_TOTAL Total amount of bytes sent CONNECTION, BANDWIDTH, SENT_LAST_SECOND_TOTAL Average bandwidth used for outgoing data in the last second (Bytes/s) CONNECTION, BANDWIDTH, SENT_LAST_SECOND_TOTAL Average bandwidth used for incoming data in the last second (Bytes/s) CONNECTION, BANDWIDTH_SENT_LAST_MINUTE_TOTAL Average bandwidth used for outgoing data in the last minute (Bytes/s) CONNECTION, BANDWIDTH_SENT_LAST_MINUTE_TOTAL Average bandwidth used for incoming data in the last minute (Bytes/s) CONNECTION, BANDWIDTH_RECEIVED_LAST_MINUTE_TOTAL Average bandwidth used for incoming data in the last minute (Bytes/s) SERVERINSTANCE_DATABASE_VERSION Database revision number SERVERINSTANCE_DATABASE_VERSION Database revision number SERVERINSTANCE_GUEST_SERVERQUERY_GROUP Default template group ID for administrators on new virtual servers (used to create initial token) SERVERINSTANCE_TEMPLATE_SERVERADMIN_GROUP Default template group ID for administrators on new virtual servers (used to create initial token) SERVERINSTANCE_MAX_DOWNLOAD_TOTAL_BANDWITDH Max bandwidth available for incoming file transfers (Bytes/s) SERVERINSTANCE_MAX_UPLOAD_TOTAL_BANDWITDH Max bandwidth available for incoming file transfers (Bytes/s) SERVERINSTANCE_TEMPLATE_SERVERDEFAULT_GROUP Default channel administrator group ID used in templates SERVERINSTANCE_TEMPLATE_CHANNELDEFAULT_GROUP Default channel administrator group ID used in templates SERVERINSTANCE_TEMPLATE_CHANNELDEFAULT_GROUP Default channel administrator group ID used in templates VIRTUALSERVERS_TOTAL_MAXCLIENTS	
CONNECTION_FILETRANSFER_BANDWIDTH_RECEIVED Current bandwidth used for incoming file transfers (Bytes/s) CONNECTION_PACKETS_SENT_TOTAL Total amount of packets sent CONNECTION_PACKETS_RECEIVED_TOTAL Total amount of packets received CONNECTION_BYTES_SENT_TOTAL Total amount of bytes sent CONNECTION_BYTES_RECEIVED_TOTAL Total amount of bytes received CONNECTION_BYTES_RECEIVED_TOTAL Total amount of bytes received CONNECTION_BANDWIDTH_SENT_LAST_SECOND_TOTAL Average bandwidth used for outgoing data in the last second (Bytes/s) CONNECTION_BANDWIDTH_RECEIVED_LAST_SECOND_TOTAL Average bandwidth used for incoming data in the last second (Bytes/s) CONNECTION_BANDWIDTH_SENT_LAST_MINUTE_TOTAL Average bandwidth used for outgoing data in the last minute (Bytes/s) CONNECTION_BANDWIDTH_RECEIVED_LAST_MINUTE_TOTAL Average bandwidth used for incoming data in the last minute (Bytes/s) CONNECTION_BANDWIDTH_RECEIVED_LAST_MINUTE_TOTAL Average bandwidth used for incoming data in the last minute (Bytes/s) SERVERINSTANCE_DATABASE_VERSION Database revision number SERVERINSTANCE_GUEST_SERVERQUERY_GROUP Default ServerQuery group ID SERVERINSTANCE_TEMPLATE_SERVERADMIN_GROUP Default template group ID for administrators on new virtual servers (used to create initial token) SERVERINSTANCE_FILETRANSFER_PORT TCP port used for file transfers SERVERINSTANCE_FILETRANSFER_PORT TCP port used for file transfers SERVERINSTANCE_MAX_DOWNLOAD_TOTAL_BANDWITDH Max bandwidth available for outgoing file transfers (Bytes/s) SERVERINSTANCE_MAX_UPLOAD_TOTAL_BANDWITDH Max bandwidth available for incoming file transfers (Bytes/s) SERVERINSTANCE_TEMPLATE_SERVERDEFAULT_GROUP Default server group ID used in templates SERVERINSTANCE_TEMPLATE_CHANNELDEFAULT_GROUP Default channel administrator group ID used in templates SERVERINSTANCE_TEMPLATE_CHANNELADMIN_GROUP Default channel administrator group ID used in templates VIRTUALSERVERS_TOTAL_MAXCLIENTS	No
CUNTECTION_PACKETS_SENT_TOTAL Total amount of packets sent CONNECTION_PACKETS_RECEIVED_TOTAL Total amount of packets received CONNECTION_PACKETS_RECEIVED_TOTAL Total amount of packets received CONNECTION_BYTES_SENT_TOTAL Total amount of bytes sent CONNECTION_BYTES_SENT_TOTAL Total amount of bytes received CONNECTION_BYTES_RECEIVED_TOTAL Total amount of bytes received CONNECTION_BANDWIDTH_SENT_LAST_SECOND_TOTAL Average bandwidth used for outgoing data in the last second (Bytes/s) CONNECTION_BANDWIDTH_RECEIVED_LAST_SECOND_TOTAL Average bandwidth used for incoming data in the last second (Bytes/s) CONNECTION_BANDWIDTH_SENT_LAST_MINUTE_TOTAL Average bandwidth used for outgoing data in the last minute (Bytes/s) CONNECTION_BANDWIDTH_RECEIVED_LAST_MINUTE_TOTAL Average bandwidth used for incoming data in the last minute (Bytes/s) CONNECTION_BANDWIDTH_RECEIVED_LAST_MINUTE_TOTAL Average bandwidth used for incoming data in the last minute (Bytes/s) SERVERINSTANCE_DATABASE_VERSION Database revision number SERVERINSTANCE_GUEST_SERVERQUERY_GROUP Default ServerQuery group ID SERVERINSTANCE_FILETRANSFER_PORT TCP port used for file transfers SERVERINSTANCE_FILETRANSFER_PORT TCP port used for file transfers SERVERINSTANCE_FILETRANSFER_PORT TCP port used for file transfers SERVERINSTANCE_MAX_UPUOAD_TOTAL_BANDWITDH Max bandwidth available for outgoing file transfers (Bytes/s) SERVERINSTANCE_MAX_UPUOAD_TOTAL_BANDWITDH Max bandwidth available for incoming file transfers (Bytes/s) SERVERINSTANCE_TEMPLATE_SERVERDEFAULT_GROUP Default server group ID used in templates SERVERINSTANCE_TEMPLATE_CHANNELDEFAULT_GROUP Default channel administrator group ID used in templates SERVERINSTANCE_TEMPLATE_CHANNELADMIN_GROUP Default channel administrator group ID used in templates VIRTUALSERVERS_TOTAL_MAXCLIENTS

Default template group ID for administrators on new virtual servers (used to create initial token) SERVERINSTANCE_FILETRANSFER_PORT TCP port used for file transfers SERVERINSTANCE_MAX_DOWNLOAD_TOTAL_BANDWITDH Max bandwidth available for outgoing file transfers (Bytes/s) SERVERINSTANCE_MAX_UPLOAD_TOTAL_BANDWITDH Max bandwidth available for incoming file transfers (Bytes/s) SERVERINSTANCE_TEMPLATE_SERVERDEFAULT_GROUP Default server group ID used in templates SERVERINSTANCE_TEMPLATE_CHANNELDEFAULT_GROUP Default channel group ID used in templates SERVERINSTANCE_TEMPLATE_CHANNELADMIN_GROUP Default channel administrator group ID used in templates VIRTUALSERVERS_TOTAL_MAXCLIENTS	Yes
SERVERINSTANCE_FILETRANSFER_PORT TCP port used for file transfers SERVERINSTANCE_MAX_DOWNLOAD_TOTAL_BANDWITDH Max bandwidth available for outgoing file transfers (Bytes/s) SERVERINSTANCE_MAX_UPLOAD_TOTAL_BANDWITDH Max bandwidth available for incoming file transfers (Bytes/s) SERVERINSTANCE_TEMPLATE_SERVERDEFAULT_GROUP Default server group ID used in templates SERVERINSTANCE_TEMPLATE_CHANNELDEFAULT_GROUP Default channel group ID used in templates SERVERINSTANCE_TEMPLATE_CHANNELADMIN_GROUP Default channel administrator group ID used in templates VIRTUALSERVERS_TOTAL_MAXCLIENTS	
SERVERINSTANCE_MAX_DOWNLOAD_TOTAL_BANDWITDH Max bandwidth available for outgoing file transfers (Bytes/s) SERVERINSTANCE_MAX_UPLOAD_TOTAL_BANDWITDH Max bandwidth available for incoming file transfers (Bytes/s) SERVERINSTANCE_TEMPLATE_SERVERDEFAULT_GROUP Default server group ID used in templates SERVERINSTANCE_TEMPLATE_CHANNELDEFAULT_GROUP Default channel group ID used in templates SERVERINSTANCE_TEMPLATE_CHANNELADMIN_GROUP Default channel administrator group ID used in templates VIRTUALSERVERS_TOTAL_MAXCLIENTS	Yes
Max bandwidth available for outgoing file transfers (Bytes/s) SERVERINSTANCE_MAX_UPLOAD_TOTAL_BANDWITDH Max bandwidth available for incoming file transfers (Bytes/s) SERVERINSTANCE_TEMPLATE_SERVERDEFAULT_GROUP Default server group ID used in templates SERVERINSTANCE_TEMPLATE_CHANNELDEFAULT_GROUP Default channel group ID used in templates SERVERINSTANCE_TEMPLATE_CHANNELADMIN_GROUP Default channel administrator group ID used in templates VIRTUALSERVERS_TOTAL_MAXCLIENTS	
SERVERINSTANCE_MAX_UPLOAD_TOTAL_BANDWITDH Max bandwidth available for incoming file transfers (Bytes/s) SERVERINSTANCE_TEMPLATE_SERVERDEFAULT_GROUP Default server group ID used in templates SERVERINSTANCE_TEMPLATE_CHANNELDEFAULT_GROUP Default channel group ID used in templates SERVERINSTANCE_TEMPLATE_CHANNELADMIN_GROUP Default channel administrator group ID used in templates VIRTUALSERVERS_TOTAL_MAXCLIENTS	Yes
Max bandwidth available for incoming file transfers (Bytes/s) SERVERINSTANCE_TEMPLATE_SERVERDEFAULT_GROUP Default server group ID used in templates SERVERINSTANCE_TEMPLATE_CHANNELDEFAULT_GROUP Default channel group ID used in templates SERVERINSTANCE_TEMPLATE_CHANNELADMIN_GROUP Default channel administrator group ID used in templates VIRTUALSERVERS_TOTAL_MAXCLIENTS	
SERVERINSTANCE_TEMPLATE_SERVERDEFAULT_GROUP Default server group ID used in templates SERVERINSTANCE_TEMPLATE_CHANNELDEFAULT_GROUP Default channel group ID used in templates SERVERINSTANCE_TEMPLATE_CHANNELADMIN_GROUP Default channel administrator group ID used in templates VIRTUALSERVERS_TOTAL_MAXCLIENTS	Yes
Default server group ID used in templates SERVERINSTANCE_TEMPLATE_CHANNELDEFAULT_GROUP Default channel group ID used in templates SERVERINSTANCE_TEMPLATE_CHANNELADMIN_GROUP Default channel administrator group ID used in templates VIRTUALSERVERS_TOTAL_MAXCLIENTS	
SERVERINSTANCE_TEMPLATE_CHANNELDEFAULT_GROUP Default channel group ID used in templates SERVERINSTANCE_TEMPLATE_CHANNELADMIN_GROUP Default channel administrator group ID used in templates VIRTUALSERVERS_TOTAL_MAXCLIENTS N	Yes
Default channel group ID used in templates SERVERINSTANCE_TEMPLATE_CHANNELADMIN_GROUP Default channel administrator group ID used in templates VIRTUALSERVERS_TOTAL_MAXCLIENTS	
SERVERINSTANCE_TEMPLATE_CHANNELADMIN_GROUP Default channel administrator group ID used in templates VIRTUALSERVERS_TOTAL_MAXCLIENTS N	Yes
Default channel administrator group ID used in templates VIRTUALSERVERS_TOTAL_MAXCLIENTS N	
VIRTUALSERVERS_TOTAL_MAXCLIENTS N	l'es
Max number of clients for all virtual servers	No
	No
Number of clients online on all virtual servers	
	No
Number of channels on all virtual servers	,
	Yes
Max number of commands allowed in <serverinstance_serverquery_flood_time> seconds</serverinstance_serverquery_flood_time>	7
_	Yes
Timeframe in seconds for <serverinstance_serverquery_flood_commands> commands</serverinstance_serverquery_flood_commands>	7
	Yes
Time in seconds used for automatic bans triggered by the ServerQuery flood protection	

VIRTUAL SERVER PROPERTIES

This is a list of properties available for virtual servers:

NAME	CHANGABLE
VIRTUALSERVER_NAME	Yes
Name of the virtual server	
VIRTUALSERVER_WELCOMEMESSAGE	Yes
Welcome message of the virtual server	
VIRTUALSERVER_MAXCLIENTS	Yes
Number of slots available on the virtual server	
VIRTUALSERVER_PASSWORD	Yes
Password of the virtual server	
VIRTUALSERVER_FLAG_PASSWORD	No
Indicates whether the server has a password set or not	No
VIRTUALSERVER_CLIENTSONLINE Number of clients connected to the virtual server	INO
VIRTUALSERVER_QUERYCLIENTSONLINE	No
Number of ServerQuery clients connected to the virtual server	INO
VIRTUALSERVER_CHANNELSONLINE	No
Number of channels created on the virtual server	110
VIRTUALSERVER_CREATED	No
Creation date and time of the virtual server as UTC timestamp	
VIRTUALSERVER_UPTIME	No
Uptime in seconds	
VIRTUALSERVER_HOSTMESSAGE	Yes
Host message of the virtual server	
VIRTUALSERVER_HOSTMESSAGE_MODE	Yes
Host message mode of the virtual server (see <u>Definitions</u>)	
VIRTUALSERVER_DEFAULT_SERVER_GROUP	Yes
Default server group ID	
VIRTUALSERVER_DEFAULT_CHANNEL_GROUP	Yes
Default channel group ID	
VIRTUALSERVER_DEFAULT_CHANNEL_ADMIN_GROUP	Yes
Default channel administrator group ID	
VIRTUALSERVER_PLATFORM	No
Operating system the server is running on	
VIRTUALSERVER_VERSION	No
Server version information including build number	
VIRTUALSERVER_MAX_DOWNLOAD_TOTAL_BANDWIDTH	Yes
Max bandwidth for outgoing file transfers on the virtual server (Bytes/s)	***
VIRTUALSERVER_MAX_UPLOAD_TOTAL_BANDWIDTH	Yes
Max bandwidth for incoming file transfers on the virtual server (Bytes/s)	Vec
VIRTUALSERVER_HOSTBANNER_URL Host banner URL opened on click	Yes
VIRTUALSERVER_HOSTBANNER_GFX_URL	Yes
Host banner URL used as image source	168
VIRTUALSERVER_HOSTBANNER_GFX_INTERVAL	Yes
Interval for reloading the banner on client-side	103
VIRTUALSERVER_COMPLAIN_AUTOBAN_COUNT	Yes
Number of complaints needed to ban a client automatically	103
VIRTUALSERVER_COMPLAIN_AUTOBAN_TIME	Yes
Time in seconds used for automatic bans triggered by complaints	100
VIRTUALSERVER_COMPLAIN_REMOVE_TIME	Yes
Time in seconds before a complaint is deleted automatically	
VIRTUALSERVER_MIN_CLIENTS_IN_CHANNEL_BEFORE_FORCED_SILENCE	Yes
Number of clients in the same channel needed to force silence	
VIRTUALSERVER_PRIORITY_SPEAKER_DIMM_MODIFICATOR	Yes
Client volume lowered automatically while a priority speaker is talking	
VIRTUALSERVER_ANTIFLOOD_POINTS_TICK_REDUCE	Yes
Anti-flood points removed from a client for being good	

NAME	CHANGABLE
VIRTUALSERVER_ANTIFLOOD_POINTS_NEEDED_COMMAND_BLOCK Anti-flood points needed to block commands being executed by the client	Yes
VIRTUALSERVER_ANTIFLOOD_POINTS_NEEDED_IP_BLOCK	Yes
Anti-flood points needed to block incoming connections from the client	
VIRTUALSERVER_HOSTBANNER_MODE	Yes
The display mode for the virtual servers hostbanner (see <u>Definitions</u>)	
VIRTUALSERVER_ASK_FOR_PRIVILEGEKEY	No
Indicates whether the initial privilege key for the virtual server has been used or not	
VIRTUALSERVER_CLIENT_CONNECTIONS	No
Total number of clients connected to the virtual server since it was last started	
VIRTUALSERVER_QUERY_CLIENT_CONNECTIONS	No
Total number of ServerQuery clients connected to the virtual server since it was last started	
VIRTUALSERVER_HOSTBUTTON_TOOLTIP	Yes
Text used for the tooltip of the host button on client-side	**
VIRTUALSERVER_HOSTBUTTON_GFX_URL	Yes
Text used for the tooltip of the host button on client-side	**
VIRTUALSERVER_HOSTBUTTON_URL	Yes
URL opened on click on the host button	Vaa
VIRTUALSERVER_DOWNLOAD_QUOTA	Yes
Download quota for the virtual server (MByte) VIRTUALSERVER_UPLOAD_QUOTA	Voc
· · · · · · · · · · · · · · · · · ·	Yes
Download quota for the virtual server (MByte) VIRTUALSERVER_MONTH_BYTES_DOWNLOADED	No
Number of bytes downloaded from the virtual server on the current month	INO
VIRTUALSERVER_MONTH_BYTES_UPLOADED	No
Number of bytes uploaded to the virtual server on the current month	INO
VIRTUALSERVER_TOTAL_BYTES_DOWNLOADED	No
Number of bytes downloaded from the virtual server since it was last started	INO
VIRTUALSERVER_ TOTAL_BYTES_UPLOADED	No
Number of bytes uploaded to the virtual server since it was last started	140
VIRTUALSERVER_UNIQUE_IDENTIFER	No
Unique ID of the virtual server	
VIRTUALSERVER ID	No
Database ID of the virtual server	
VIRTUALSERVER_MACHINE_ID	Yes
Machine ID identifying the server instance associated with the virtual server in the database	
VIRTUALSERVER_PORT	Yes
UDP port the virtual server is listening on	
VIRTUALSERVER_AUTOSTART	Yes
Indicates whether the server starts automatically with the server instance or not	
CONNECTION_FILETRANSFER_BANDWIDTH_SENT	No
Current bandwidth used for outgoing file transfers (Bytes/s)	
CONNECTION_FILETRANSFER_BANDWIDTH_RECEIVED	No
Current bandwidth used for incoming file transfers (Bytes/s)	
CONNECTION_PACKETS_SENT_TOTAL	No
Total amount of packets sent	
CONNECTION_PACKETS_RECEIVED_TOTAL	No
Total amount of packets received	
CONNECTION_BYTES_SENT_TOTAL	No
Total amount of bytes sent	
CONNECTION_BYTES_RECEIVED_TOTAL	No
Total amount of bytes received	2.
CONNECTION_BANDWIDTH_SENT_LAST_SECOND_TOTAL	No
Average bandwidth used for outgoing data in the last second (Bytes/s)	
CONNECTION_BANDWIDTH_RECEIVED_LAST_SECOND_TOTAL	No
Average bandwidth used for incoming data in the last second (Bytes/s)	N.T.
CONNECTION_BANDWIDTH_SENT_LAST_MINUTE_TOTAL	No
Average bandwidth used for outgoing data in the last minute (Bytes/s)	3. T
CONNECTION_BANDWIDTH_RECEIVED_LAST_MINUTE_TOTAL Average bandwidth used for incoming data in the last minute (Bytes/s)	No

NAME	CHANGABLE
VIRTUALSERVER_STATUS	Yes
Status of the virtual server (online virtual online offline booting up shutting down)	
VIRTUALSERVER_ LOG_CLIENT	Yes
Indicates whether the server logs events related to clients or not	
VIRTUALSERVER_ LOG_QUERY	Yes
Indicates whether the server logs events related to ServerQuery clients or not	
VIRTUALSERVER_ LOG_CHANNEL	Yes
Indicates whether the server logs events related to channels or not	
VIRTUALSERVER_LOG_PERMISSIONS	Yes
Indicates whether the server logs events related to permissions or not	
VIRTUALSERVER_ LOG_SERVER	Yes
Indicates whether the server logs events related to server changes or not	
VIRTUALSERVER_ LOG_FILETRANSFER	Yes
Indicates whether the server logs events related to file transfers or not	
VIRTUALSERVER_MIN_CLIENT_VERSION	Yes
Min client version required to connect	
VIRTUALSERVER_NEEDED_IDENTITY_SECURITY_LEVEL	Yes
Minimum client identity security level required to connect to the virtual server	
VIRTUALSERVER_NAME_PHONETIC	Yes
Phonetic name of the virtual server	
VIRTUALSERVER_ICON_ID	Yes
CRC32 checksum of the virtual server icon	
VIRTUALSERVER_RESERVED_SLOTS	Yes
Number of reserved slots available on the virtual server	
VIRTUALSERVER_TOTAL_PACKETLOSS_SPEECH	No
The average packet loss for speech data on the virtual server	
VIRTUALSERVER_TOTAL_PACKETLOSS_KEEPALIVE	No
The average packet loss for keepalive data on the virtual server	
VIRTUALSERVER_TOTAL_PACKETLOSS_CONTROL	No
The average packet loss for control data on the virtual server	
VIRTUALSERVER_TOTAL_PACKETLOSS_TOTAL	No
The average packet loss for all data on the virtual server	
VIRTUALSERVER_TOTAL_PING	No
The average ping of all clients connected to the virtual server	
VIRTUALSERVER_IP	No
The IPv4 address the virtual server is listening on	
VIRTUALSERVER_WEBLIST_ENABLED	Yes
Indicates whether the server appears in the global web server list or not	
VIRTUALSERVER_CODEC_ENCRYPTION_MODE	Yes
The global codec encryption mode of the virtual server	
VIRTUALSERVER_FILEBASE	No
The directory where the virtual servers filebase is located	

CHANNEL PROPERTIES

This is a list of properties available for channels:

	CHANGABLE
CHANNEL_NAME	Yes
Name of the channel	
CHANNEL_TOPIC	Yes
Topic of the channel	
CHANNEL_DESCRIPTION	Yes
Description of the channel	
CHANNEL_PASSWORD	Yes
Password of the channel	
CHANNEL_FLAG_PASSWORD	No
Indicates whether the channel has a password set or not	
CHANNEL CODEC	Yes
Codec used by the channel (see <u>Definitions</u>)	
CHANNEL_CODEC_QUALITY	Yes
Codec quality used by the channel	165
CHANNEL MAXCLIENTS	Yes
Individual max number of clients for the channel	103
CHANNEL MAXFAMILYCLIENTS	Yes
Individual max number of clients for the channel family	165
CHANNEL ORDER	Yes
ID of the channel below which the channel is positioned	168
CHANNEL_FLAG_PERMANENT	Yes
Indicates whether the channel is permanent or not	res
	Yes
CHANNEL_FLAG_SEMI_PERMANENT	res
Indicates whether the channel is semi-permanent or not	37
CHANNEL_FLAG_TEMPORARY	Yes
Indicates whether the channel is temporary or not	37
CHANNEL_FLAG_DEFAULT	Yes
Indicates whether the channel is the virtual servers default channel or not	37
CHANNEL_FLAG_MAXCLIENTS_UNLIMITED Indicates whether the channel has a max clients limit or not	Yes
	37
CHANNEL_FLAG_MAXFAMILYCLIENTS_UNLIMITED	Yes
Indicates whether the channel has a max family clients limit or not	37
CHANNEL_FLAG_MAXFAMILYCLIENTS_INHERITED	Yes
Indicates whether the channel inherits the max family clients from his parent channel or not	77
CHANNEL_NEEDED_TALK_POWER	Yes
Needed talk power for this channel	77
CHANNEL_NAME_PHONETIC	Yes
Phonetic name of the channel	
CHANNEL_FILEPATH	No
Path of the channels file repository	
CHANNEL_FORCED_SILENCE	No
Indicates whether the channel is silenced or not	
CHANNEL_ICON_ID	Yes
CRC32 checksum of the channel icon	
CHANNEL_CODEC_IS_UNENCRYPTED	Yes
Indicates whether speech data transmitted in this channel is encrypted or not	
CPID	Yes
The channels parent ID	
	No
CID	NO

CLIENT PROPERTIES

This is a list of properties available for clients:

NAME	CHANGABLE
CLIENT_UNIQUE_IDENTIFIER	No
Unique ID of the client	
CLIENT_NICKNAME	Yes
Nickname of the client	
CLIENT_VERSION	No
Client version information including build number	
CLIENT_PLATFORM	No
Operating system the client is running on	
CLIENT_INPUT_MUTED	No
Indicates whether the client has their microphone muted or not	
CLIENT_OUTPUT_MUTED	No
Indicates whether the client has their speakers muted or not	
CLIENT_INPUT_HARDWARE	No
Indicates whether the client has enabled their capture device or not	
CLIENT_OUTPUT_HARDWARE	No
Indicates whether the client has enabled their playback device or not	
CLIENT_DEFAULT_CHANNEL	No
Default channel of the client	
CLIENT_LOGIN_NAME	No
Username of a ServerQuery client	110
CLIENT_DATABASE_ID	No
Database ID of the client	INO
· · · · · · · · · · · · · · · · · · ·	Me
CLIENT_CHANNEL_GROUP_ID	No
Current channel group ID of the client	
CLIENT_SERVER_GROUPS	No
Current server group IDs of the client separated by a comma	
CLIENT_CREATED	No
Creation date and time of the clients first connection to the server as UTC timestamp	
CLIENT_LASTCONNECTED	No
Creation date and time of the clients last connection to the server as UTC timestamp	
CLIENT_TOTALCONNECTIONS	No
Total number of connections from this client since the server was started	
CLIENT_AWAY	No
Indicates whether the client is away or not	
CLIENT_AWAY_MESSAGE	No
Away message of the client	
CLIENT_TYPE	No
Indicates whether the client is a ServerQuery client or not	
CLIENT_FLAG_AVATAR	No
Indicates whether the client has set an avatar or not	
CLIENT_TALK_POWER	No
The clients current talk power	110
CLIENT_TALK_REQUEST	No
Indicates whether the client is requesting talk power or not	INO
	Me
CLIENT_TALK_REQUEST_MSG	No
The clients current talk power request message	***
CLIENT_IS_TALKER	Yes
Indicates whether the client is able to talk or not	
CLIENT_MONTH_BYTES_DOWNLOADED	No
Number of bytes downloaded by the client on the current month	
CLIENT_MONTH_BYTES_UPLOADED	No
Number of bytes uploaded by the client on the current month	
CLIENT_TOTAL_BYTES_DOWNLOADED	No
Number of bytes downloaded by the client since the server was started	
CLIENT_TOTAL_BYTES_UPLOADED	No
Number of bytes uploaded by the client since the server was started	

NAME	CHANGABLE
CLIENT_IS_PRIORITY_SPEAKER	No
Indicates whether the client is a priority speaker or not	
CLIENT_UNREAD_MESSAGES	No
Number of unread offline messages in this clients inbox	
CLIENT_NICKNAME_PHONETIC	No
Phonetic name of the client	
CLIENT_DESCRIPTION	Yes
Brief description of the client	
CLIENT_NEEDED_SERVERQUERY_VIEW_POWER	No
The clients current ServerQuery view power	
CONNECTION_FILETRANSFER_BANDWIDTH_SENT	No
Current bandwidth used for outgoing file transfers (Bytes/s)	
CONNECTION_FILETRANSFER_BANDWIDTH_RECEIVED	No
Current bandwidth used for incoming file transfers (Bytes/s)	
CONNECTION_PACKETS_SENT_TOTAL	No
Total amount of packets sent	
CONNECTION_PACKETS_RECEIVED_TOTAL	No
Total amount of packets received	
CONNECTION_BYTES_SENT_TOTAL	No
Total amount of bytes sent	
CONNECTION_BYTES_RECEIVED_TOTAL	No
Total amount of bytes received	
CONNECTION_BANDWIDTH_SENT_LAST_SECOND_TOTAL	No
Average bandwidth used for outgoing data in the last second (Bytes/s)	
CONNECTION_BANDWIDTH_RECEIVED_LAST_SECOND_TOTAL	No
Average bandwidth used for incoming data in the last second (Bytes/s)	
CONNECTION_BANDWIDTH_SENT_LAST_MINUTE_TOTAL	No
Average bandwidth used for outgoing data in the last minute (Bytes/s)	
CONNECTION_BANDWIDTH_RECEIVED_LAST_MINUTE_TOTAL	No
Average bandwidth used for incoming data in the last minute (Bytes/s)	
CONNECTION_CLIENT_IP	No
The IPv4 address of the client	
CLIENT_IS_CHANNEL_COMMANDER	Yes
Indicates whether the client is a channel commander or not	
CLIENT_ICON_ID	Yes
CRC32 checksum of the client icon	
CLIENT_COUNTRY	No
The country identifier of the client (i.e. DE)	

DEFINITIONS

The following enumerations can be used to change the behavior of various ServerQuery commands:

```
enum HostMessageMode {
 {\tt HostMessageMode\_LOG = 1,}
                                            // 1: display message in chatlog
  HostMessageMode_MODAL,
                                            // 2: display message in modal dialog
 HostMessageMode_MODALQUIT
                                            // 3: display message in modal dialog and close connection
};
enum HostRannerMode {
 HostMessageMode_NOADJUST = 0.
                                           // 0: do not adjust
 HostMessageMode_IGNOREASPECT,
                                           // 1: adjust but ignore aspect ratio (like TeamSpeak 2)
// 2: adjust and keep aspect ratio
 HostMessageMode_KEEPASPECT
};
enum Codec {
 CODEC_SPEEX_NARROWBAND = 0,
                                           // 0: speex narrowband
                                                                       (mono, 16bit, 8kHz)
  CODEC_SPEEX_WIDEBAND,
                                           // 1: speex wideband
                                                                       (mono, 16bit, 16kHz)
 CODEC_SPEEX_ULTRAWIDEBAND,
                                           // 2: speex ultra-wideband (mono, 16bit, 32kHz)
 CODEC_CELT_MONO
                                            // 3: celt mono
                                                                       (mono, 16bit, 48kHz)
enum CodecEncryptionMode {
 CODEC_CRYPT_INDIVIDUAL = 0,
                                           // 0: configure per channel
  CODEC_CRYPT_DISABLED,
                                           // 1: globally disabled
                                            // 2: globally enabled
 CODEC_CRYPT_ENABLED
}:
